Executive Summary

Hazard Management Consulting, Inc. (HMC) is pleased to submit this Environmental Site Assessment (ESA) for the property referenced above in the City of Redlands, California (Subject Property) (Figures 1 & 2). This ESA was prepared to evaluate the Subject Property for potential Recognized Environmental Conditions (RECs) that may be present and was conducted as part of your due diligence efforts prior to redevelopment of the Subject Property for residential development. The Subject Property consists of one parcel, occupying approximately 9.01 acres of undeveloped vacant land.

The Subject Property is relatively flat with an elevation of approximately 1,610 feet above mean sea level (msl) with a regional slope to the west. The Subject Property is located in the City of Redlands, California and is set in a mixed-use type setting with residential, commercial, and industrial activities.

The Subject Property is in an area zoned for Single Family Residential (R-1) use and is bound:

- to the north by single-family residential development;
- on the east by Wabash Avenue, followed by Power Components (851 N. Wabash Avenue), and Mission Steel (881 N. Wabash Avenue);
- to the south by East Colton Avenue, followed by single-family residential development, Orange Blossom Trail, and a public park; and,
- to the west by single-family residential development.

Key findings of this Phase I ESA are as follows:

- The Subject Property consists of one parcel, occupying approximately 9.01 acres of undeveloped vacant land. The Subject Property is relatively flat with an elevation of approximately 1,610 feet above mean sea level (msl) with a regional slope to the west. The Subject Property is located in the City of Redlands, California and is set in a mixed-use type setting with residential, commercial, and industrial activities.
- The Subject Property is located in the Bunker Hill Subbasin which consists of the alluvial materials that underlie the San Bernardino Valley. Based on information obtained from a nearby Leaking Underground Storage Tank (LUST) case at a facility located approximately 2,207 feet north of the Subject Property, groundwater was reported at depths of approximately 110 to 150 feet below ground surface (bgs) and flows in a westerly direction.

- The Subject Property has historically been utilized as agricultural land as a citrus grove from as early as 1938 to at least 1995. The Subject Property has remained vacant undeveloped land from at least 2002 to present. The Subject Property vicinity was historically vacant or agricultural land and has been developed with single-family residential development to the north, south, and west, and light industrial buildings to the east.
- The Subject Property is located on the northwest corner of E. Colton Avenue and N. Wabash Avenue and consists of one parcel occupying approximately 9.01 acres. The Subject Property was observed to be a vacant lot and was covered with vegetation. No hazardous materials were observed to be in use at the Subject Property. There was no evidence of underground storage tanks (USTs), above ground storage tanks (ASTs), or wells observed at the Subject Property. One Southern California Edison transformer vault was observed near the southeast corner of the Subject Property and appeared to be in good condition with no signs of stains or leaks.
- While there were facilities reported to utilize hazardous chemicals or have had releases in the vicinity of the Subject Property, none of the facilities are expected to have impacted the Subject Property. There were no RECs identified from the review of records for off-site sources.
- Based on the results of this investigation, the likelihood of a vapor intrusion condition at the Subject Property is low.
- There are no structures present at the Subject Property and it is unlikely that asbestos-containing materials are present at the Subject Property.

Conclusions

We have performed a Phase I Environmental Site Assessment in accordance with ASTM E1527-21 Guidelines for the property at the northwest corner of East Colton Avenue & Wabash Avenue, Assessor's Parcel Number: 0168-291-02, in Redlands, California. Based on the results of this assessment HMC has found no evidence of RECs, HRECs, or CRECs.

Recommendations

Based on the findings of this ESA, HMC recommends that you consider shallow soil sampling for the presence of agricultural chemicals such as pesticides and herbicides. While there is a low likelihood that such materials are still present given the amount of time that has transpired since the citrus groves were present, it has been our experience that the local regulatory agencies are frequently asking for such analysis as part of permitting and entitlement.

1. INTRODUCTION

Hazard Management Consulting, Inc. (HMC) is pleased to submit this Environmental Site Assessment (ESA) for the property referenced above in the City of Redlands, California (Subject Property) (Figures 1 & 2). This ESA was prepared to evaluate the Subject Property for potential Recognized Environmental Conditions (RECs) that may be present and was conducted as part of your due diligence efforts prior to redevelopment of the Subject Property for residential development. The Subject Property consists of one parcel, occupying approximately 9.01 acres of undeveloped vacant land.

The Subject Property is relatively flat with an elevation of approximately 1,610 feet above mean sea level (msl) with a regional slope to the west. The Subject Property is located in the City of Redlands, California and is set in a mixed-use type setting with residential, commercial, and industrial activities.

1.1. Objective

In accordance with the ASTM E 1527-21 Standard Practice for Environmental Subject Property Assessments, the objective of the ESA is to assess, to the extent feasible under the standard, the likelihood that Recognized Environmental Conditions (RECs), as defined by ASTM, are present at the Subject Property.

A Recognized Environmental Condition "means (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment" (ASTM Standard Practice E1527-21). The term REC is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Performance of a Phase I ESA is intended to reduce, but not eliminate, uncertainty

regarding the potential for Recognized Environmental Conditions in connection with a property, within reasonable limits of time and cost.

All Appropriate Inquiries (AAI) as defined in the Final Rule (40 CFR, Part 312), must be conducted by persons seeking the landowner liability protections under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) prior to acquiring a property or seeking or receiving federal brownfields grants under the authorities of CERCLA. The purpose of AAI, as defined in the AAI Final Rule, is to identify releases and threatened releases of hazardous substances, which cause or threaten to cause the incurrence of response costs. The U.S. Environmental Protection Agency (EPA) has stated that ASTM Standard E-1527-21 is consistent with the Standards and Practices for AAI, and is compliant with the statutory criteria for AAI.

1.2. Scope of Services, Methodology and Limitations

The findings of this ESA must be viewed in recognition of certain limiting conditions. The scope of work commissioned for this project does not represent an exhaustive study, but rather a reasonable inquiry, consistent with good commercial practice, in general accordance with ASTM Practice E-1527-21.

The scope of work for this ESA included the following activities:

- A reconnaissance visit to document the current condition of the Subject Property and neighboring facilities.
- Review of a regulatory database report.
- Review of previously prepared reports for the Subject Property.
- Submittal of questionnaires to the current Owner and User of the report.
- Review of historical references including aerial photographs, city directories, Sanborn Maps and topographic maps.
- On-line research and file review requests concerning the Subject Property and suspect off-site sources at the Nevada Division of Environmental Protection Bureau of Sustainable Materials Management, Bureau of Corrective Actions, and GeoMap Website.
- Preparation of this report of findings.

In the course of this assessment, HMC has relied on information provided by outside parties, such as regulatory agencies, previous reports and interview sources. For the purpose of this assessment, such third-party information is assumed to be accurate unless contradictory evidence is noted, and HMC does not express or imply any warranty regarding information provided by third-party sources.

2. SUBJECT PROPERTY DESCRIPTION

2.1. Subject Property Setting

The Subject Property consists of one parcel, occupying approximately 9.01 acres of undeveloped vacant land. The Subject Property is relatively flat with an elevation of approximately 1,610 feet above mean sea level (msl) with a regional slope to the west. The Subject Property is located in the City of Redlands, California and is set in a mixed-use type setting with residential, commercial, and industrial activities.

The Subject Property is in an area zoned for Single Family Residential (R-1) use and is bound:

- to the north by single-family residential development;
- on the east by Wabash Avenue, followed by Power Components (851 N. Wabash Avenue), and Mission Steel (881 N. Wabash Avenue);
- to the south by East Colton Avenue, followed by single-family residential development, Orange Blossom Trail, and a public park; and,
- to the west by single-family residential development.

Southern California Gas Company (SoCal Gas) reportedly provides natural gas and electrical services to the Subject Property. Water and sewer services are provided to the Subject Property by the City of Redlands.

2.2. Regional Geology and Hydrogeology

The Subject Property is located in the Bunker Hill Subbasin which consists of the alluvial materials that underlie the San Bernardino Valley. This subbasin is bounded by contact with consolidated rocks of the San Gabriel Mountains, San Bernardino Mountains, and Crafton Hills, and by several faults. The southern boundary is the Banning fault, the east boundary is the Redlands fault, the San Andreas fault is roughly the northern boundary, the Glen Helen fault abuts the northwest boundary, and the southwest boundary is the San Jacinto fault. The Santa Ana River, Mill Creek, and Lytle Creek are the main tributary streams in the subbasin (SBVWCD 2000). The range in annual precipitation is 13 to 31 inches.

The water-bearing material in the subbasin consists of Holocene and Pleistocene age alluvial deposits of sand, gravel, and boulders interspersed with deposits of silt and clay. The water-bearing material has been divided into upper and lower aquifers (Hardt and Hutchinson 1980). In the central part of the subbasin, a poorly permeable clay layer separates the aquifers, creating confined conditions in the lower aquifer under about 25 square miles of the valley. Maximum thickness of the upper aquifer is approximately 350 feet, and maximum thickness of the lower aquifer is approximately 650 feet. Groundwater generally converges toward the Santa Ana River in the southwestern part of the subbasin and discharges over the San Jacinto fault at Colton Narrows (USGS 1989). Wells yield up to 5,000 gpm and average about 1,245 gpm. Specific yield of these deposits ranges from 7 – 21 percent and average 13 percent (WE 2000). In general, the far eastern and northwestern portions of the Bunker Hill Subbasin show the largest decreases while the rest of the subbasin shows mostly stable or increasing ground water elevations. Average changes in ground water level elevations between Fall 1998 and Fall 1999 ranged up to an increase of about three feet (SBVWCD 2000).

The Groundwater beneath the Subject Property is regulated by the California Regional Water Quality Control Board (RWQCB) who assigns various uses for waters of the State as presented in their basin plan (RWQCB, 1995). Based on information obtained from a nearby Leaking Underground Storage Tank (LUST) case at a facility located approximately 2,207 feet north of the Subject Property, groundwater was reported at depths of approximately 110 to 150 feet below ground surface (bgs) and flows in a westerly direction.

2.3. Interviews and User Provided Information

The User of this report is Vanita Soni Puri who is the current owner of the Subject Property and would be considered a “User” of the report per ASTM definitions. We requested all available information from the User.

2.4. Title Records

A Commitment for Title Insurance (Report) prepared by First American Title Company was provided to HMC for review. The Report was dated October 14, 2021, and the Title was indicated to be vested in: Vanita Soni Puri, Trustee of The Vanita Soni Puri 2012 Irrevocable Trust Dated November 28, 2012, as to an Undivided One-Third Interest; Varun Soni, Trustee of The Varun Soni 2012 Irrevocable Trust Dated November 28, 2012, as to an Undivided One-Third Interest; and Vaneesh Soni, Trustee of The Vaneesh Soni 2012 Irrevocable Trust Dated November 28, 2012, as to an Undivided One-Third Interest; as

Tenants in Common. The Report had information on property taxes, easements and liens but no relevant information on environmental features, recordings or information indicative of an environmental concern.

2.5. User Knowledge

The User of this report Vanita Soni Puri and their investors and lender. We were able to interview Ms. Vanita Soni Puri regarding their knowledge and information regarding the Subject Property. Ms. Puri indicated they had no prior knowledge or unique information regarding the Subject Property and was unaware of any litigation, or remedial actions at the Subject Property or any Land Use Restrictions. Ms. Puri provided information regarding utility providers to the Subject Property and indicated that the Subject Property was vacant undeveloped land that was previously utilized for agriculture.

2.6. Owner/Occupant Knowledge

The Owner of the Subject Property is Vanita Soni Puri. Information regarding the Owner's knowledge of the Subject Property is described in Section 2.5.

2.7. Environmental Liens or Activity and Use Limitations

HMC is unaware of any liens or AULs at the Subject Property.

3. SUBJECT PROPERTY USE AND HISTORY

Past usage of the Subject Property was assessed through a review of historical aerial photographs, topographic maps and an EDR search of city directories and prior reports. Review of the Sanborn Map collection indicates that Sanborn Maps were not produced for the Subject Property.

3.1. Aerial Photograph Review

Aerial photographs covering the Subject Property were obtained from Environmental Data Resources, Inc. (EDR). Photographs were available from the period 1938 through 2020. Copies of the aerial photographs are included in Appendix B. A summary of the observations noted from the aerial photographs are as follows:

1938-1968 In these photographs the Subject Property and Subject Property vicinity were noted to be agricultural or vacant land. One industrial building was observed to the east of the Subject Property across N. Wabash Avenue.

1975-1985 In these photographs the Subject Property was observed to be agricultural

land utilized for citrus groves. The Subject Property vicinity was observed to be developed with residential structures to the south, vacant or agricultural land to the west and north, and industrial buildings to the east.

1989-1995 In these photographs the Subject Property was observed to be agricultural land utilized for citrus groves. The Subject Property vicinity was observed to be developed with residential structures to the north, south, and west, and industrial buildings to the east.

2002-2020 In these photographs the Subject Property was observed to be vacant undeveloped land. No significant changes were observed in the Subject Property vicinity.

3.2. Topographic Maps

Historical topographic maps were also reviewed as part of this effort and aided in interpreting the overall history of the subject property. No additional information was gathered from review of the topographic maps.

3.3. Sanborn Maps

Sanborn maps are maps that were created for the insurance industry to document business activities in metropolitan areas of the country and were used in underwriting. They often times contain detailed information about a Subject Property. While they were prepared for insurance underwriting and were not environmental maps per se, they often times contain information that is useful in evaluating the historical use of a Subject Property. Sanborn maps were not generated for the Subject Property.

3.4. EDR City Directory Review

EDR performed a search of the City Directory records for the Subject Property address and nearby properties at approximately five-year intervals. Review of this report indicated that there were no directory listings for the Subject Property.

3.5. City of Redlands

A public records request was submitted to the City of Redlands Building and Safety Department (RBSD) requesting information pertaining to building permits and inspection records. RBSD indicated that there were no records available pertaining to building records for the Subject Property. One notice of violation was issued to the Subject

Property in November 2012 regarding overgrown vegetation. The violation was subsequently corrected and no information regarding environmental issues at the Subject Property was available.

3.6. Summary

The Subject Property has historically been utilized as agricultural land as a citrus grove from as early as 1938 to at least 1995. The Subject Property has remained vacant undeveloped land from at least 2002 to present. The Subject Property vicinity was historically vacant or agricultural land and has been developed with single-family residential development to the north, south, and west, and light industrial buildings to the east.

4. PRIOR INVESTIGATIONS

Prior investigations were not reportedly produced for the Subject Property.

5. SUBJECT PROPERTY RECONNAISSANCE

Mr. Gage Costales of HMC, conducted a Subject Property and vicinity reconnaissance on May 9, 2023. The reconnaissance was conducted in order to identify visible evidence of RECs at the Subject Property and to assess possible off-site conditions that may impact the Subject Property. Mr. Costales was unaccompanied during the Subject Property reconnaissance.

The Subject Property is located on the northwest corner of E. Colton Avenue and N. Wabash Avenue and consists of one parcel occupying approximately 9.01 acres. The Subject Property was observed to be a vacant lot and was covered with vegetation. No hazardous materials were observed to be in use at the Subject Property. There was no evidence of underground storage tanks (USTs), above ground storage tanks (ASTs), or wells observed at the Subject Property. One Southern California Edison transformer vault was observed near the southeast corner of the Subject Property and appeared to be in good condition with no signs of stains or leaks.

5.1. Site Vicinity

The Subject Property consists of one parcel, occupying approximately 9.01 acres of undeveloped vacant land. The Subject Property is relatively flat with an elevation of approximately 1,610 feet above mean sea level (msl) with a regional slope to the west. The Subject Property is located in the City of Redlands, California and is set in a mixed-use type setting with residential, commercial, and industrial activities.

The Subject Property is in an area zoned for Single Family Residential (R-1) use and is bound:

- to the north by single-family residential development;
- on the east by Wabash Avenue, followed by Power Components (851 N. Wabash Avenue), and Mission Steel (881 N. Wabash Avenue);
- to the south by East Colton Avenue, followed by single-family residential development, Orange Blossom Trail, and a public park; and,
- to the west by single-family residential development.

No facilities were observed in the vicinity that pose a REC to the Subject Property from a visual basis.

6. REGULATORY AGENCY DATABASE RESEARCH

Regulatory agency database information was obtained from a standard radius Site Assessment (ASTM) report by Environmental Data Resources, Inc. The center of the search was in the approximate center of the Subject Property. Search distances for specific databases were one-quarter to one mile as specified in the ASTM 1527-21 standard. The database search includes over 70 federal, state, local, and proprietary records. A complete copy of this report is included in Appendix B.

6.1. Database Records Concerning the Target Property

The Subject Property was not listed in any regulatory databases.

6.2. Database Records Concerning the Subject Property Vicinity

We reviewed the database report for off-Site potential sources within the relevant search distance. In review of the many entries on the database, we reviewed the following factors that affect the ability of a facility to affect the Subject Property:

- Distance from the Subject Property,
- Location from the Subject Property with regard to the direction of groundwater flow,
- Nature of the release and whether the release has affected soil, groundwater or both,
- Status of the investigation (e.g. open or closed)

Groundwater was noted to flow in a westerly direction at another nearby facility, therefore facilities located adjacent to or to the east were further considered. Only those

facilities judged using these factors are discussed below. The following presents a summary of our findings:

Location	Address	Dist.	Direction	Lists	REC	RATIONALE
Mission Steel Fabrication	881 N. Wabash Ave.	18'	East	HWTS, CERS HAZ WASTE, HAZNET, SAN BERN CO. PERMIT, CERS, RCRA NONGEN/NLR	NO	This facility is reported on the listed databases as a hazardous waste generator and chemical storage facility. This facility has received multiple administrative violations which were corrected and subsequently returned to compliance. There are no records of spills or releases reported at this facility. The listings for this facility would not constitute an REC.
Larry Jacinto Construction, Inc.	988 N. Wabash Ave.	107'	Northeast	HWTS, RCRA-SQG, FINDS, ECHO, HAZNET, SAN BERN CO. PERMIT	NO	This facility is reported on the listed databases as a small quantity generator of hazardous waste. This facility was reported to have a permit to operate a petroleum AST in September 2006. There are no records of violations, spills or releases reported at this facility. The listings for this facility would not constitute an REC.
Loran, Inc.	1705 E. Colton Ave.	292'	East	RCRA-SQG, SAN BERN CO. PERMIT, CERS, PFAS ECHO	NO	This facility is reported on the listed databases as being a generator of hazardous waste in 2014. There are no records of violations, spills or releases reported at this facility. The facility is listed in the PFAS ECHO database. Despite EPA taking steps toward classifying PFAS as a hazardous substance, they have not done so yet. So, by definition, PFAS are not considered a REC within the constructs of a Phase I ESA but are a relevant issue of note. No records of a release of PFAS were reported at this facility. The listings for this facility would not constitute an REC.
C & S Powder Coating	1717 E. Colton Ave.	451'	East	HWTS, CERS HAZ WASTE, HAZNET, SAN BERN CO. PERMIT, CIWQS, CERS	NO	This facility is reported on the listed databases as a hazardous waste generator and chemical storage facility. The facility is reported with multiple administrative violations that were corrected and subsequently returned to compliance. There are no records of spills or releases at the facility. The listings for this facility would not constitute an REC.

Orphan Sites

Orphan Sites are those properties that are included on various agency lists, but for which the records do not have sufficient address information for the database program to map

the property. No orphan site listed in the EDR report were found to be in the vicinity of the Subject Property.

6.3. Summary of Off-Site Issues

While there were facilities reported to utilize hazardous chemicals or have had releases in the vicinity of the Subject Property, none of the facilities are expected to have impacted the Subject Property. There were no RECs identified from the review of records for off-site sources.

7. LOCAL AGENCY AND OTHER RECORDS REVIEW

7.1. Tribal Records

The Subject Property is not located in a tribal area therefore there were no tribal records to review.

7.2. Oil and Gas Wells

The State of California Geologic Energy Management Division online mapping website was reviewed for the location of active, plugged, or abandoned oil wells in the vicinity of the Subject Property. No oil wells were listed as having been drilled at the Subject Property in the vicinity of the Subject Property.

7.3. State of California

The State of California Geotracker and EnviroStor websites were also reviewed for information on potential on site facilities that are being investigated or remediated under either RWQCB or DTSC oversight. No active sites were listed on these databases that were not listed in the EDR review.

7.4. San Bernardino County Fire Protection District

HMC submitted a records request to the San Bernardino County Fire Protection District (SBCFPD). SBCFPD indicated there are no records available for the Subject Property.

8. VAPOR INTRUSION, ASBESTOS AND OTHER CONCERNS

8.1. Vapor Intrusion

Based on the results of this investigation, the likelihood of a vapor intrusion condition at the Subject Property is low.

8.2. Asbestos

There are no structures present at the Subject Property and it is unlikely that asbestos-containing materials are present at the Subject Property.

8.3. Radon

The Subject Property is listed as being located in Zone 2 with regards to radon indicating that radon maybe present at concentrations ranging 2-4 pico curies / liter.

8.4. Mold

No evidence of mold or water damage was observed at the Subject Property.

8.5. PFAS (per- and polyfluoroalkyl substances)

Despite EPA taking steps toward classifying PFAS as a hazardous substance, they have not done so yet. So, by definition, PFAS are not considered a REC within the constructs of a Phase I ESA but are a relevant issue of note. No evidence of sources of materials that could release PFAS were observed at the Subject Property.

We did not encounter any data gaps during this assessment.

11. CONCLUSIONS

We have performed a Phase I Environmental Site Assessment in accordance with ASTM E1527-21 Guidelines for the property at the northwest corner of East Colton Avenue & Wabash Avenue, Assessor's Parcel Number: 0168-291-02, in Redlands, California. Based on the results of this assessment HMC has found no evidence of RECs, HRECs, or CRECs.

12. RECOMMENDATIONS

Based on the findings of this ESA, HMC recommends that you consider shallow soil sampling for the presence of agricultural chemicals such as pesticides and herbicides. While there is a low likelihood that such materials are still present given the amount of time that has transpired since the citrus groves were present, it has been our experience that the local regulatory agencies are frequently asking for such analysis as part of permitting and entitlement.

13. QUALIFICATIONS

Mark S. Cousineau, NREP

Mr. Mark S. Cousineau, principal with HMC, has a diverse professional background in environmental management, which includes working as a generator, regulator, consultant, and corporate advisor in hazardous waste and other environmental issues.

To projects such as these, Mr. Cousineau brings expertise in evaluating complex sites and developing solutions to solve the technical, operational, regulatory, financial and timing issues. In addition, Mr. Cousineau routinely assists clients in developing environmental business plans for single assets and multi-site real estate portfolios and has designed and implemented several tenant audit programs involving the proactive management of environmental risk caused by on-site commercial and industrial tenant activities.

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/06/2023 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration's document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

EDR HIGH RISK HISTORICAL RECORDS

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.
