

FINAL REPORT

CITYWIDE PAVEMENT MANAGEMENT PROGRAM UPDATE (PMP 2020)

***Prepared for:
City of Redlands, CA
March, 2020***

This page intentionally left blank

March 11, 2020

Mr. Goutam Dobey, P.E.
Engineering Manager
Municipal Utilities and Engineering Department
P.O. Box 3005
Redlands, CA 92373

Subject: Final Report - Pavement Management Program (PMP 2020)

Dear Mr. Dobey:

As part of the Citywide Pavement Management Program update for the City of Redlands, Bucknam Infrastructure Group, Inc. is pleased to submit the Final Report for the updated Pavement Management Program (PMP 2020).

The information contained in this report was used to develop the recommended improvement program for the pavement network. The report covers the following categories:

- **Executive Summary, Findings and Recommendations (Section I)**
- **Pavement Management Program Development and Reporting (Section II)**
- **Pavement Conditions For Each Segment in the Network (PCI Report – Section III)**
The Pavement Condition Index report shows the present condition of each street in the pavement network. In addition, the report shows the basic geometry of each street segment.
- **Recommended Maintenance and Repair Strategies**
The recommended maintenance and repair strategies were used to generate the Forecasted Maintenance Report and were based on our winter 2019 inspections. Additionally, we have assessed and incorporated unit cost and maintenance application practices/types with our strategies.
- **Projected Projects based on those Strategies (Forecasted Maintenance Report – Section IV)**
The Forecasted Maintenance Report projects the street maintenance activities required for the next five years, broken down to show maintenance levels for all streets. The forecast maintenance report included is sorted by functional classification and fiscal year.

BUCKNAM INFRASTRUCTURE GROUP, INC.

Our thorough analysis of previous and current PMP strategies enabled our staff to make proactive recommendations to the City's updated Pavement Accelerated Repair and Implementation Strategy (PARIS) pavement Capital Improvement Program (CIP). As stated by the City, specific arterial and residential rehabilitation projects are scheduled for design and construction for the next five years.

All comments received from the City have been incorporated in the reports that follow. All of the City's issues and needs that were brought to our attention are included in the report. It has been a pleasure working with you and the City on updating the Pavement Management Program (PMP 2020). We look forward to the continued success of this project and future teamwork with City staff.

Sincerely,

Bucknam Infrastructure Group, Inc.,

A handwritten signature in black ink, appearing to read "Peter J. Bucknam". The signature is fluid and cursive, with the first name being the most prominent.

Peter J. Bucknam
Project Manager

SECTION I EXECUTIVE SUMMARY

CITYWIDE PAVEMENT MANAGEMENT PROGRAM UPDATE

This report reflects the continued dedication and proactive management of the City's Pavement Management Program (PMP); the last major update to the City's PMP was performed in 2012. The implementation of the City's Pavement Accelerated Repair and Implementation Strategy (PARIS) was based upon the results from the PMP 2012 study. The goal of the PARIS initiative was to proactively pave two-thirds of the City's streets through five (5) phases of improvement. The final phase of the PARIS program is being designed and construction is scheduled for mid - FY 2020.

The City is currently using the Army Corps of Engineers PMP software, MicroPAVER, to manage the street network. This system is essential to the City in that it assists the Municipal Utilities and Engineering staff in identifying necessary Capital Improvement Program (CIP) funding levels for the arterial and local street systems as well as cost-effectively managing proactive maintenance & repairs throughout the network. Under this project, the City has incorporated the development of a unique Pavement Management – GIS layer that will assist the City in spatially analyzing pavement conditions and other attribute information that resides in the MicroPAVER database.

One of the key purposes of the PMP is to identify the greatest return on Engineering investments by combining pavement field condition data with annual budget allocations. The MicroPAVER computer modeling forecasts street conditions based on short-term and long-term budget scenarios (typically 5-years). This develops a potential list of candidate projects for the City to consider as well as demonstrates each budgets scenario's conditional /economic return-on-investment (ROI). This new PMP document incorporates a project forecasting strategy developed by Bucknam and City Engineering staff which not only follows the City's PARIS maintenance and rehabilitation project budgets but also addresses the needs of certain streets which would typically be excluded from the project roster generated by MicroPAVER due to their condition being below the baseline level of selection used within the computer model.

By annually using the PMP as one of its primary budgetary planning tools, Redlands Engineering staff has been successful in achieving measurable improvements in the condition of the City's network of streets. The continuously upward-trend in pavement condition has certainly been the result of not only an ongoing commitment by the City Council in providing the necessary funding for Pavement Management within the City's yearly budgets but also proper selection by staff.

The Redlands PMP has been updated to assist City personnel by providing current data on the City's street network and to develop cost-effective maintenance strategies to maintain a desirable level of pavement service and performance on a network scale. In turn, this will optimize the expenditure of limited fiscal resources. The project consisted of inspecting over 300 miles and/or 650 lane miles of streets as well as assisting in updating the City's 5-Year CIP. The updated PMP report has identified recommendations and deficiencies in the current operating and maintenance efforts put forth by the City.

Specifically, the program provides administrators and maintenance personnel with:

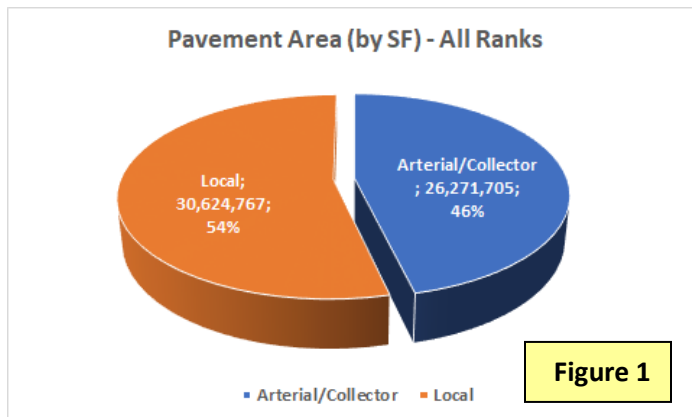

- *the present condition status of the pavement network (all streets), as a whole and of any grouping or individual component within the City (arterial, collector, etc.);*
- *a ranked list of all streets, or segments of streets, by condition within the network;*
- *rehabilitation/maintenance needs of each street segment by year;*
- *an optimized priority maintenance and rehabilitation program based on cost/benefit analysis and various levels of funding;*
- *optimum annual budget levels for pavement maintenance for the current and the following five (5) years;*
- *prediction of the future performance of the City's pavement network and each individual street section;*
- *updated PMP data to assist the City with the continued management of the PARIS program; and*
- *pavement condition data and analysis presented in ArcGIS and within the City's GIS Enterprise*

Pavement is a dynamic structure where deterioration is constantly occurring; thus the pavement management system needs to be updated on a regular basis to reflect these changes in pavement conditions, pavement maintenance histories, and maintenance strategies based upon budgetary constraints. In our approach to develop the City's forecasted maintenance recommendations we worked with City staff in identifying unit costs for all maintenance practices used on an annual. Currently, based upon the City's maintenance practices and their associated unit costs, the total replacement value of the Redlands pavement network is \$253,189,300. This value clearly indicates that the City's pavement network is the most valuable and essential asset to Redlands. The City's use of slurry seal, convention AC Overlay, Full Depth Reclamation and R&R practices are typically applied at a five year, ten year and 25 year frequency respectively. These frequencies are typical but the City may see increases in deterioration rates due to environmental, load and high average daily traffic (ADT) volumes. For example, high ADT volumes along one of Redlands's arterial streets will increase deterioration rates for a previously applied AC Overlay compared to a small local street. These deterioration rates are monitored through frequent inspections and functional class deterioration analysis within the City's PMP database.

This report reflects our findings and recommendations for the PMP and the current state of the City's pavement network. Furthermore, we have recommended detailed funding and maintenance strategies for the arterial/collector and residential networks for next five (5) years.

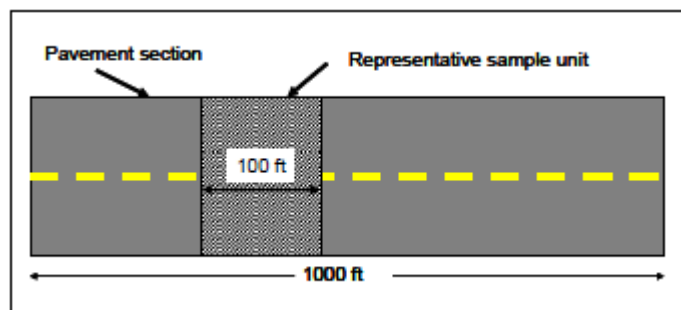

SUMMARY OF CITY'S PAVEMENT NETWORK

The City of Redlands is responsible for maintaining approximately 2,394 pavement segments within its jurisdiction (56,896,472 square feet of pavement); there are approximately 300 miles of streets or 650 lane miles of streets within the network. The Arterial / Collector network consists of 26,271,705 SF of pavement totaling in 110 street miles. The Residential network consists of 30,624,767 SF of pavement totaling in 190 street miles.

The City's pavement network is broken down into manageable groups that have similar characteristics, such as pavement rank, surface type and logical segmentation. Pavement segments are identified by their branch and section numbers. Pavement "branches" that have a common usage, such as Brockton Ave., defines a "branch" within MicroPAVER. Pavement "sections" are pavement segments within a designated branch that has consistent pavement rankings, construction/maintenance histories and use (i.e. Texas St. to Lawton St.). Representative inspection samples are then selected and visually surveyed to locate distress data. This data is used to calculate the section Pavement Condition Index (PCI) which includes distress type, distress extents and severities.

The PCI is a condition rating that ranges from 100 (a new pavement section or recently overlaid or reconstructed) to 0 for a section that has structurally failed and deteriorated dramatically. Weighted average PCI = pavement section PCI * its area / by the total square footage of the specific network or pavement area. Table 1 summarizes the conditions found within the Redlands network.

The weighted average PCI for the City's Arterial / Collector network is 83.2

The weighted average PCI for the City's Local network is 80.9

The weighted average PCI for the City's Overall network is 82.0

CURRENT CITYWIDE CONDITIONS

The overall condition of the City’s network is “Good” with a weighted average PCI of **82.0** based on the conditions and surface areas found within each segment.

Rank	Mileage	SF	Weighted PCI 2019
Arterial/Collector	110	26,271,705	83.2
Local	190.0	30,624,767	80.9
Citywide	300.0	56,896,472	82.0

Table 1 – Redlands PMP Network Quantities and Condition Results

The distribution of the City’s overall pavement network is shown in Section II, page 25 of this report (Condition Distribution).

Condition	PCI Range	Arterial/Collector	Locals	Total Mi.	% of Network
Very Good	(86-100)	69.3	115.4	184.7	62%
Good	(75-85)	15.3	24.7	40.0	13%
Fair	(60-74)	11.2	12.1	23.3	8%
Poor	(41-59)	8.7	18.7	27.4	9%
Very Poor	(0-40)	5.5	19.1	24.6	8%
		110.0	190.0	300.0	

Table 2 – PCI Range Distribution by Segment

As shown above, a large majority of segments are evenly distributed through Very Good to Good condition categories. With the City’s network currently showing a weighted PCI of 82.0, combined with 76% of its sections within these condition ranges, the network is in a “preventive condition status”. This means that long-term maintenance & repair (M&R) & CIP funding will be greatly decreased over the next ten years. The PARIS projects that are scheduled for construction in the Spring of 2020 will continue to increase this result. Moving into the next five years of pavement management, in order to sustain these conditions the proper amount of overlay rehabilitation and slurry seal maintenance needs to be budgeted. The condition ranges shown above are defined by the ASTM D6433-18 “Standard Practice for Roads and Parking Lots Pavement Condition Index Surveys”.

As shown in Table 2, over 25% of the City’s entire network falls within the fair, poor and very poor condition categories based on PCI, highlighting the need for continued long-term funding for preventative & rehabilitation projects. More overlay rehabilitation activity will increase the City’s overall weighted PCI while reducing deferred maintenance costs in future fiscal years. Overlay projects applied to appropriate, qualifying segments will be necessary to maintain the City’s network at a preventative condition status as described above. Additionally, a network-wide weighted PCI status is typically a network with a weighted average PCI over 75.

- Regarding the Local network detailed conditional analysis combined with maintenance recommendations by PCI (based on Pages 6 – 8) show that 17% (32 miles) of the local pavement network requires slurry seal maintenance activity while 23% (44 miles) requires overlay rehabilitation of full-depth reconstruction. We highly recommend that the City continues to utilize its

neighborhood/zone approach to where projects are schedule in large groupings in order to save on costs for PS&E, construction logistics and management.

- With the manageable amount of local sections needing maintenance & repair the City should appropriate the proper amount of funding to the local street network in order to sustain its weighted PCI in the range of 80 to 82. We have included within Section II of this report the recommended annual funding allocations that will sustain this network. Due to the size of the Local network it will continue to be a potential high-level contributor to the amount of deferred M&R unless additional pavement funding is appropriated.
- In regard to the Arterial network, the overall condition indicates that the proper amount of funding and appropriate AC/PCC improvements have been applied over the past 5+ years. With the overall PCI at 83.2, long-term sustainability of this network should be the City's goal. Over the next 10 years a continuous application of new preventative/rehabilitation projects needs to be scheduled remove the remaining high cost overlays/reconstructions.
- Arterial / Collector data is showing that 15% (16.0 miles) of the pavement network requires slurry seal maintenance activity while 22% (24.7 miles) requires overlay rehabilitation of full reconstruction
- With the supplement of SB1, PARIS and Measure I revenue sources coming to the City over the next several fiscal years these essential projects can be scheduled and expedited.

Through our assessment of the City's annual pavement maintenance budget allocations (FY 2019/20-2024/25) if a major reduction in Arterial/Local CIP funds occur this will cause the City's citywide weighted PCI to decrease over the next five years. We highly recommend a continuation of the PARIS program.

Furthermore, as large overlay and rehabilitation projects are considered for funding, the City should also consider using sub-grade R - Values, structural design, distress severities and extents as parameters for determining whether a pavement section that lies within the Fair to Very Poor condition range should be overlaid or reconstructed.

PCI conditions reflect "surface" conditions; additional sub-surface data such as coring data, R-Values and sub-grade conditions will provide City to with a better approach to the M&R that should be applied.

Overall, these findings are positive in that the amount of preventative maintenance revenues to maintain the network is not overbearing or detrimental to the system as a whole. Cost efficient preventative maintenance with the combination of increased overlay funding should be the focus of the PMP for the next several years.

Bucknam developed a multi-year Capital Improvement Program for the City based on the pavement records, yearly capital expenditures and the most recent FY 2019/20 inspections. We worked closely with the City in determining a proactive maintenance CIP; this included a detailed review of available CIP, State, County and maintenance funding, local unit cost for M&R and neighborhood/zone

scheduling.

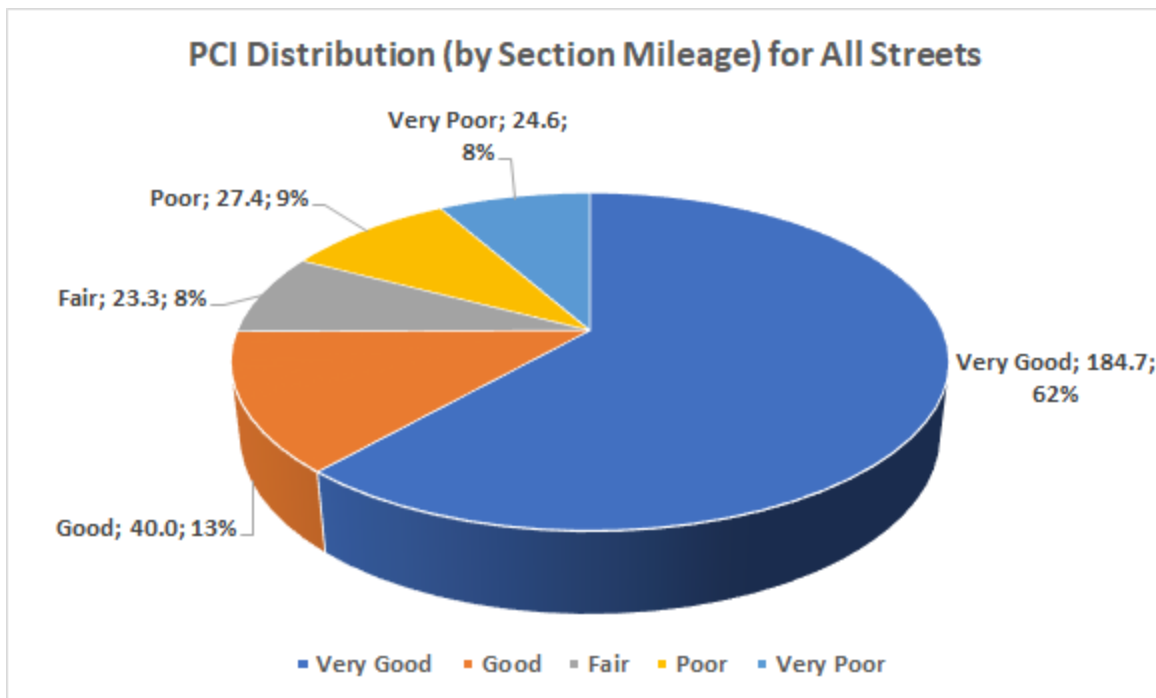

Figure 2 – PCI Distribution (by total section mileage) for All Streets

MAINTENANCE / REHABILITATION STRATEGY DEVELOPMENT

Based on the results of the condition survey and input from the City, pavement maintenance/rehabilitation strategies were assessed and published within MicroPAVER. At the outset, City and *Bucknam Infrastructure Group, Inc. (Bucknam)* staff identified a distribution of City maintenance funds that would be applied to the network over the next five years. This was based upon the desire to prevent the decrease in street conditions and not allow an increase in the maintenance backlog funds over the five-year program.

With this approach, Bucknam has recommended a “minimal level of service” which creates a major dividing line in determining pavement maintenance. Based on the City’s weighted average PCI, condition distribution, and maintenance practices, our team has identified a PCI of “65” as the minimum level of service. **This means that pavement section with a PCI less than 65 will be potentially recommended for conventional AC grind & overlay with localized R&R. Sections with PCI’s above 65 are potential candidates for less expensive methods such as slurry sealing when combined with extensive pavement preparatory work.** These and other AC/PCC pavement treatment recommendations are indicated in Table 7, Section II.

As shown in Figure 2, 75% of the City’s streets are in Very Good to Good condition. These sections will be targeted for “preventive” maintenance within our CIP recommendations (crack sealing, patching, slurry seal). Sections within the Good condition category (13%) will typically carry a recommendation for slurry seal maintenance. The reasoning in doing this is to extend the life cycles of those “good” pavement sections which accrues capital saving to aggressively rehabilitate those pavement sections that are below the “minimal level of service”.

In order to achieve the most effective and optimum program for the City, certain strategies have been selected and/or analyzed. Below is a listing of the maintenance strategies / activities utilized in development. Each activity is representative of the types of work that have been programmed as part of the long-term maintenance requirements of the City's street network.

Our team met with City staff to discuss the current unit costs, funding levels and maintenance practices being applied to the network each fiscal year to gain a strong understanding of how the previous and current maintenance strategies performed in the past. For additional detail on the following activities see Section II. The services which are proposed to be financed from the assessments will include the following:

General Repairs-Stop Gap (Preventative) – PCI Range – 85 to 100

Surface treatments generally utilized as “holding action” solutions to delay the need for pavement structural strengthening. Generally include activities such as deep patching, skin patching, grinding and leveling.

Slurry Seals (Global) – PCI Range – 60 to 85

Surface treatments applied to pavements with minimal surface distress to provide new wearing surfaces and extend pavement life. Generally consists of a mixture of conventional or latex-modified emulsified asphalt, well-graded fine aggregate, mineral filler and water placed over an existing AC surface. Slurry seals are used to fill existing pavement surface defects as a wearing course. There are three basic aggregate gradations used in slurry seals: Type 1 (fine); Type 2 (general); and Type 3 (coarse).

The City of Redlands utilizes conventional Type II Slurry Seal.

1.5” to 2.0” Grind / Overlay & ARHM Overlay (Major); – PCI Range – 25 to 65

Localized removal of the existing pavement section to a prescribed depth followed by the placement of a conventional flexible pavement section using a structural AC Hot Mix or AR Hot Mix or full depth asphalt. Each classification of road has a typical design cross-section upon anticipated traffic loading.

Projects include all labor, material and equipment required to replace localized failed sections of the roadway as it becomes necessary; work will involve removal / reconstruction and/or slot grinding of localized areas, and large aggregate base-paving. It is necessary prior to the ARHM overlay finish.

- **1.5” to 2.0” Convention AC Overlay** - Includes the costs required to perform the maintenance overlays within the City. Work will involve a localized cold milling (4-ft header cut) to a minimum 1.5” depth. After which an overlay will be applied.

Full Depth Reclamation - Reconstruction (Major Maintenance*); PCI range – 0 to 25

Removal of the existing pavement section to a prescribed depth followed by the placement of a conventional flexible pavement section using a structural AC Hot Mix, ARHM or a full depth asphalt. Each classification of road has a typical design cross-section upon anticipation traffic loading. By performing a reconstruction the sections PCI resets at 100 and restarts the life-cycle deterioration curve of the section.

City utilizes Full Depth Reclamation (FDR). This process includes pulverization (with cement), moisture conditioning, use of breakdown rollers, shaping, pneumatic or steel roller, finish roller, sealant and final surface course. The City performs FDR at depths of 6" to 12" with FDR-25 or FDR-200.

*Localized, Global and Major maintenance activities are default terms used within the MicroPAVER pavement software. Specific pavement repair applications are placed within each maintenance activity in order to develop multi-year maintenance forecast recommendations.

ANNUAL BUDGET PROJECTIONS

The budgeting process was approached with the following in mind; generate three unique work programs for the next five (5) years based upon actual road pavement conditions in order to:

1. Demonstrate how the “actual” citywide pavement budget (\$25,400,000/5yr) performs against the 2019 conditions
2. Demonstrate a proactive annual budget that “increases” the weighted PCI to 84 after five years
3. Demonstrate a “constrained” annual budget to determine how the City’s weighted PCI responds by FY 2023-24

Based on pavement maintenance needs, three (3) annual work programs have been prepared and summarized below. Table 3 demonstrates the how conditions react to the City’s annual pavement funding budget (\$25,400,000/5yr); Table 4 demonstrates the necessary funding to “increase” the weighted PCI to 84; Table 5 demonstrates a constrained budget and how the citywide weighted average PCI responds after five years (each scenario addresses arterial and local streets). The revenues shown below include construction cost, plus costs for Engineering Design/Administration, Construction Management & Inspection and City overhead (unit costs were provided by City staff).

Plan Year	PCI	Prev / Slurry Seal	AC Overlay/Recon	Total Funded \$	Deferred Maintenance
Current	82.0	~	~	~	\$28,996,200
2019-20	84.6	\$0	\$8,496,200	\$8,496,200	\$20,715,400
2020-21	83.2	\$1,867,500	\$131,800	\$1,999,300	\$20,739,100
2021-22	83.4	\$1,450,300	\$4,996,500	\$6,446,800	\$17,109,100
2022-23	81.9	\$1,855,400	\$144,300	\$1,999,700	\$17,765,900
2023-24	82.0	\$5,062,200	\$1,386,400	\$6,448,600	\$17,857,100
		\$10,235,400	\$15,155,200	\$25,390,600	

Table 3 – Citywide Projection Utilizing \$25.4 Million / 5Yr Budget

Plan Year	PCI	Prev / Slurry Seal	AC Overlay/Recon	Total Funded \$	Deferred Maintenance
Current	82.0	~	~	~	\$28,996,200
2019-20	84.6	\$0	\$8,496,200	\$8,496,200	\$20,715,400
2020-21	84.4	\$532,100	\$5,717,300	\$6,249,400	\$17,789,500
2021-22	84.1	\$1,450,300	\$4,793,400	\$6,243,700	\$14,515,600

		\$8,166,500	\$25,313,200	\$33,479,700	

Table 4 – Necessary Annual Funding to Increase PCI to 84

Plan Year	PCI	Prev / Slurry Seal	AC Overlay/Recon	Total Funded \$	Deferred Maintenance
Current	82.0	~	~	~	\$28,996,200
2019-20	84.6	\$0	\$8,496,200	\$8,496,200	\$20,715,400
2020-21	83.2	\$532,100	\$1,739,000	\$2,271,100	\$21,005,400
2021-22	82.0	\$1,450,300	\$925,400	\$2,375,700	\$22,751,900
2022-23	80.7	\$1,121,900	\$1,275,500	\$2,397,400	\$24,223,600
2023-24	79.1	\$2,271,600	\$2,176,600	\$4,448,200	\$26,597,000
		\$5,375,900	\$14,612,700	\$19,988,600	

Table 5 – Constrained Annual Funding

Additional detail and breakdown of budget projections are demonstrated in Section IV of this report. All work program budgets generated are presented in terms of 2019 dollars. All repair activities were based on distresses observed at the time of the field survey. These are recommendations and are to be used as “the best case scenario” for improving the City of Redlands street network.

QUALITY CONTROL EFFORTS

Quality control efforts begin at the notice-to-proceed; this involved full assessment of the previous MicroPAVER database (provided by the City) as well as available GIS data associated with the Redlands street network. A full analysis of street classification was performed and specific street classifications edits were made. The City indicated that all neighboring streets shared with neighboring local agencies should be reflected in our reporting.

Based on existing and new segmentation data, corrections to section SF’s and splitting of sections were performed to account for street improvements, missing streets, new streets / tract developments.

As indicated in our scope of work, we performed numerous quality control checks in the field during survey efforts as well as specific site investigations requested by the City. Field check efforts were performed at the end of each week of survey as well as a final effort once all required inspections were complete. 10% of the pavement inspection set was resurveyed by a second team to ensure the quantities and distress types were collected properly (approx. 28 miles).

FINDINGS AND RECOMMENDATIONS

Arterials / Collectors

The actual workload requirements identified indicate that the Arterial / Collector network is currently in “Good” condition. **To maintain this condition, it is critical that preventive maintenance and overlay activities are funded at the levels identified in Table 3 to maintain a “good” network weighted average PCI value.**

Our arterial/collector findings for conditional data and recommendations for revenue expenditures are shown below:

- The Arterial/Collector network has a weighted PCI of 83.2;
- 22% of the arterial network (approx. 24.7 miles) qualify for overlay/reconstruction; while 15% (approx. 16.0 miles) qualify for slurry seal maintenance;
- Currently, the identified \$28.9 million of deferred slurry, overlay and reconstruction M&R on the Redlands network **consists of 26% preventative maintenance and 74% rehabilitation / reconstruction.**
- Develop a proactive fiscal and planned approach to identify future arterial overlay projects based on the deterioration modeling within MicroPAVER;
- Appropriate the necessary arterial revenues at the levels shown within the Section IV Forecasted Maintenance Report for a minimum of five years to generate the results identified within this report;
- Reassess/re-evaluate the arterial rehabilitation budget program every two years to improve on CIP forecasts for 2020-21 and beyond to ensure the results shown in Table 3;
- Perform pavement inspections on the arterial network every two years in order to proactively track pavement deterioration rates and to improve upon the planning modes shown within this report;
- Demonstrated budget shown in Table 4 is ample improve the Arterial weighted PCI of 83 after five years, furthermore, the citywide deferred backlog decreases from a level of \$28.9 million to \$10.9 million after five years;
- **Bucknam recommends that the City proactively budget pavement maintenance at the levels shown in Table 4 in order to improve upon the conditions found today as well as decrease the amount of citywide deferred maintenance that resides on the network; and**
- **Continuation of the PARIS program is highly recommended and should be reviewed through biennial updates to the PMP.**

Locals

The actual workload requirements identified indicate that the Local network is currently in “Good” condition. **To improve upon this condition, it is critical that preventive maintenance and conventional overlay activities are funded at the levels above those identified in Table 4 and the reports in Section IV.**

Our Local findings for conditional data and recommendations for revenue expenditures are shown below:

- The Local network has a weighted PCI of 80.9;
- 23% of the Local network (approx. 44 miles) qualify for overlay/reconstruction; while 17% (approx. 32 miles) qualify for slurry seal maintenance;
- Currently, the identified \$28.9 million of deferred slurry, cape, overlay and reconstruction M&R on the Redlands network **consists of 26% preventative maintenance and 74% rehabilitation / reconstruction.**
- Demonstrated budget shown in Table 3 is ample to maintain the Local weighted PCI; proactive funding needs to be implemented to see these results;
- Follow the proactive Local preventive slurry seal and overlay fiscal plan approach shown in the Section IV reporting;
- Reassess/re-evaluate the Local rehabilitation budget program every two years to improve on Section IV budget forecasts for 2020-21 and beyond to ensure the results shown in Table 3;
- Perform pavement inspections on one-third of the Local network each year to build upon the solid planning models within MicroPAVER to track PCI deterioration;
- **Demonstrated budget shown in Table 4 is ample improve the Local weighted PCI of 80.9 after five years, furthermore, the citywide deferred backlog increases from a level of \$28.9 million to \$10.9 million after five years;**
- **Continuation of the PARIS program is highly recommended and should be reviewed through biennial updates to the PMP.**

SECTION II

PAVEMENT MANAGEMENT PROGRAM / CAPITAL IMPROVEMENT PROGRAM

Bucknam performed the following services in accordance with the scope of services that was contracted with the City of Redlands.

Numerous studies from the United States Army Corps of Engineers and APWA have shown that it is much more cost effective to maintain a pavement segment in good condition over its useful life in comparison to letting it deteriorate to the point that it requires a major overlay or reconstruction, which is shown in sample deterioration curve (Figure 3) below.

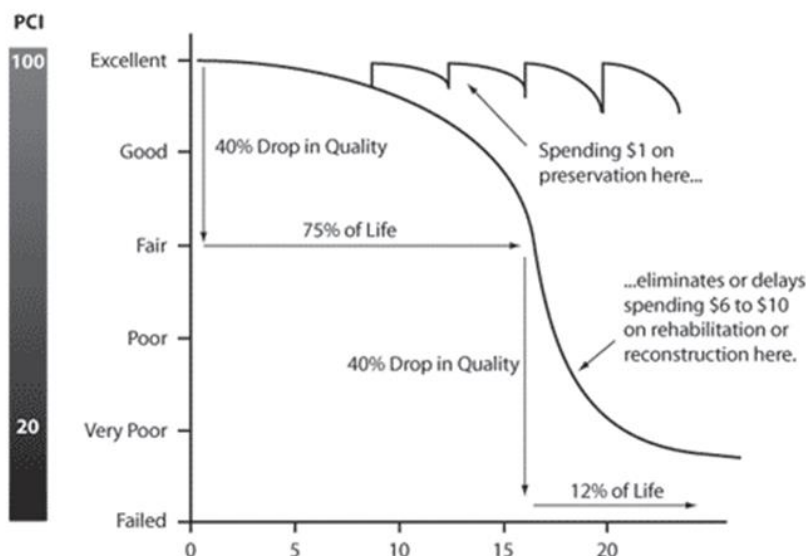

Figure 3 – Sample Pavement Life Cycle

Each \$1.00 spent on maintenance within the “Good” range will cost \$6.00 to \$9.00 for reconstruction if projects are deferred.

Summary of PMP Project

As a part of the pavement management program update, a major element of work was to complete a comprehensive assessment of the existing street network and PMS database within the City. This included assessing the City’s 2012 MicroPAVER dataset, GIS centerline file, street naming conventions, functional classifications and work history information. From there, Bucknam worked with the City to confirm public and private street listings which set the foundation for accurate CIP reporting.

Work history information was provided by the City in the form of completed bid documents, institutional knowledge, previous spreadsheet files, and GIS maps. This information was entered into the proper pavement segments that match the limits of those projects. Our staff converted the previous MicroPAVER PMP and developed the City’s new PMP with MicroPAVER; all previous and critical pavement data was converted from the past system.

Table 6 demonstrates PCI ranges and condition terms defaulted within MicroPAVER. Once a pavement inspection is complete, a PCI is calculated for each pavement section. Each PCI calculated now falls within a defined PCI range category, furthermore, a weighted PCI was calculated for all the streets within the network (weighted average PCI = pavement section PCI * its area / by the total square footage of the network). This information can also be represented through MicroPAVER to show how much square footage or percentage of area falls within PCI range category.

PCI Range	Condition
86-100	Very Good
75-85	Good (2020 Redlands = 82)
60-74	Fair
41-59	Poor
0-40	Very Poor

**Previous 2012
PCI = 53 (Prior
to PARIS)**

Table 6 - PCI Range

From there, CIP pavement recommendations were performed (discussed and demonstrated below) where the pavement maintenance information the City provided (PMP material practices, unit costs and capital budgets) were used to generate recommendations through the MicroPAVER system.

The summary of all roads condition data and their representative PCI's can be seen in the Pavement Condition Report in Section III.

MAINTENANCE / REHABILITATION STRATEGY ASSIGNMENT TABLE

Once the appropriate activities from the above listings were selected by the City, a Maintenance / Rehabilitation Strategy Table was defined within MicroPAVER that assigned the appropriate actions to the specific repair needs of the street. In defining these strategies, emphasis was placed on defining pavement condition thresholds and using the PCI for the specific maintenance activities within these categories.

Maintenance / Rehabilitation Strategy Assignment Table

All Streets		
PCI Range	Description	Unit Cost
85-100	Preventative, Stop Gap, Patching	Varies by Activity
Varies by Activity		
60-85	Type II Slurry Seal	\$0.44/SF
Minimal Level of Service (65)		
45-65	1.5" Grind & Overlay (includes 4" header cut)	\$2.50/SF
25-65	2" Grind & Overlay	\$2.81/SF
0-25	Pulverize 6" - 2" AC (FDR-25)	\$3.68/SF
0-25	Pulverize 9" - 3" AC (FDR-25)	\$4.31/SF
0-25	Pulverize 12" - 4" AC (FDR-25)	\$4.93/SF
0-25	Pulverize 6" - 2" AC (FDR-200)	\$3.93/SF
0-25	Pulverize 9" - 3" AC (FDR-200)	\$4.62/SF
0-25	Pulverize 12" - 4" AC (FDR-200)	\$5.25/SF
<i>30% Contingency included within All Unit Costs</i>		

Table 7 – Maintenance / Rehabilitation Strategy Assignments

The M&R Strategy Assignments List, shown in Table 7, was developed to identify the most critical segments in each of the work programs (Arterial/Collector and Local). Segment priorities were established by determining the range of PCI's requiring first attention based on the relative value of each segment's PCI, thus maximizing the annual maintenance budget. Also, distress quantity, area extent, type and severity were critical elements in the decision process for recommending maintenance. A 30% contingency was placed on each unique maintenance unit cost in order to account for the administration efforts performed by City staff during design and project construction; additionally, a 3% unit cost inflation factor was applied across the term of the CIP.

Once the strategy assignments were set within the system, budgets and work assignments were generated for each work program on an annual basis. Using pavement deterioration curves for each type of pavement surface and class of road, both current year and future years work requirements for each pavement segment within the City were determined. In forecasting the maintenance requirements in future years, the current PCI value is reduced annually for each pavement segment based on the MicroPAVER deterioration curves within the City's database.

Likewise, maintenance activities performed in a given year increase the PCI value as they are applied to

the segment. The overall program is dynamic in that each strategy consists of a cyclic series of actions that simulates the pavement anticipated life cycle.

ANNUAL CIP/M&R WORK PROGRAM PROJECTIONS

The goal of these projections is to assist City policy makers in utilizing the recommendations of the MicroPAVER system. By using the City of Redlands current budgets and maintenance practices the system will develop “section unique” improvements and strategies. Each segment will be tied to a specific fiscal year. As shown in the following pages, we have assessed the budgets that have been projected to meet the maintenance and rehabilitations needed to maximize the City’s return on investment. The budget forecasting goal for the network focused on:

- ❖ Establishing a proactive multi-year Maintenance & Rehabilitation Program;
- ❖ Developing a preventive maintenance program; and
- ❖ Selecting the most cost effective repairs based on City strategies

ACTUAL – The actual \$25.4 mil/5yr budget was determined by the City based upon previous, current and future spending levels on a yearly basis for pavement maintenance within the City. The Actual budget scenario was generated for the City to demonstrate how the current spending levels affect future spending levels and how the network PCI reacts to the budget on a yearly basis. We have included the schedule FY 2019-20 PARIS streets within our projections.

INCREASE PCI BUDGET – An “increase” budget was generated for the City to demonstrate the necessary annual funding required to increase the weighted PCI level to a level of 84 after five years.

CONSTRAINED BUDGET – A “constrained” budget was generated for the City to demonstrate how a limited annual funding allocation impacts the City’s weighted PCI and deferred maintenance.

****All multi-year budget projections include a 3% inflation rate for the term of the budget forecast.***

ACTUAL BUDGET

(Citywide 5-yr Projection)

The annual projected revenues shown below only account for the cost of pavement maintenance and rehabilitation activities. A 30% contingency was applied to the Arterial / Collector and Local pavement unit costs.

The following FY 2019-2024 budget forecast revenues were based on the operational criteria:

Plan Year	Measure I, PARIS Fund, SB1	Funding Allocation
2019-20	\$8,500,000	PARIS 2019-20 Projects
2020-21	\$2,000,000	Maintenance Projects
2021-22	\$6,450,000	Overlay/Resurfacing Project
2022-23	\$2,000,000	Maintenance Projects
2023-24	\$6,450,000	Overlay/Resurfacing Project
Total	\$25,400,000	

Table 8 – Redlands Five-Year Pavement Budget Projection

ACTUAL (\$25,400,000 / 5YR) – The first key step in developing a proactive PMP is to model the City’s existing conditions against an “actual” annual budget. In doing this, PCI performance, deferred maintenance and pavement application uses are able to benchmarked and demonstrated in a positive or negative result. Bucknam utilized the City’s \$25.4 Million/5yr budget to establish a benchmark scenario for pavement funding; the City provided Bucknam with 2019 unit costs for pavement maintenance

\$25,400,000/5YR BUDGET PROGRAM (FIVE-YEAR MODEL)

This budget program incorporates pavement sections that have a functional class of Arterial (PR, C) and Local (R).

Plan Year	PCI	Prev / Slurry Seal	AC Overlay/Recon	Total Funded \$	Deferred Maintenance
Current	82.0	~	~	~	\$28,996,200
2019-20	84.6	\$0	\$8,496,200	\$8,496,200	\$20,715,400
2020-21	83.2	\$1,867,500	\$131,800	\$1,999,300	\$20,739,100
2021-22	83.4	\$1,450,300	\$4,996,500	\$6,446,800	\$17,109,100
2022-23	81.9	\$1,855,400	\$144,300	\$1,999,700	\$17,765,900
2023-24	82.0	\$5,062,200	\$1,386,400	\$6,448,600	\$17,857,100
		\$10,235,400	\$15,155,200	\$25,390,600	

Table 9 – Citywide Projection Utilizing \$25.4 Million/ 5Yr Budget

By modeling the existing pavement conditions against \$25.4 Million/5yr funding, we have found that two major positive results occur over the five year CIP. (See Figure 4 below). First, the weighted PCI for the entire network only increases from a level of 82.0 and naturally returns to 82.0 over the five year CIP. Sustaining a citywide weighted average of 82.0 is the optimal PCI value for long-term management.

The resulting deferred maintenance backlog decreases from \$28.9 million to \$17.9 million after the five years program which indicates that a five year \$25,400,000 pavement budget is viable in the long-term modeling (this equates to a 38% decrease). It is proactive and properly funded in the first two years of the program, in the long-term, the network PCI will level out and eventually return to 82.0 at FY 2023-24. We recommend sustaining the Redlands PMP network weighted PCI between 82 to 84. We have demonstrated how this can be achieved in our additional budget scenario (see Section II, page 8).

Within the calculated citywide deferred maintenance 26% of the costs are for slurry and stop gap maintenance and 74% for grind/overlay and reconstruction.

As shown, this projection model does meet the initial goal of decreasing the moderate amounts of citywide overlay rehabilitation projects. In order for these scenarios to produce these results proactive and sustained annual funding is necessary; on a biennial basis, the City should monitor the management of overlay deferred maintenance. The potential delay in projects and the resulting buildup of more overlay work in the five-year time frame is not a debt that City will want to accept.

Through Bucknam’s analysis of the previous pavement database, work history dates and our experience with AC Overlay deterioration rates, it is important to point out that pavement sections that were overlaid in the mid-part of the 2000’s (FY’s 2005-2007) will need proper overlay rehabilitation approximately around fiscal year 2020-21 and beyond.

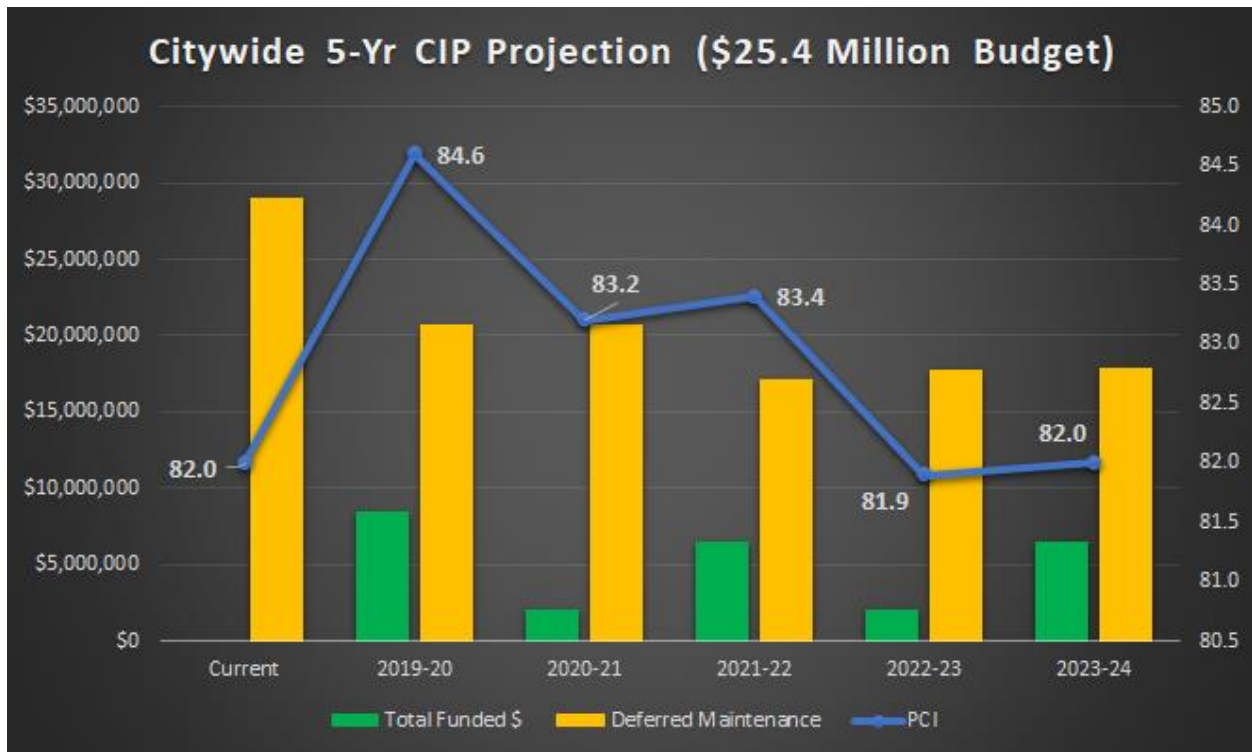

Figure 4 – Resulting Network PCI (\$25.4 Million/5yr Budget)

The resulting \$11.1 million decrease in deferred maintenance/rehabilitation, shown above, demonstrates how applying sufficient capital funds to the network allows the City’s slurry/overlay deferred maintenance to decrease by approx. 38% which is conducive to a long-term successful PMP. Additionally, it is important to note, the City should continue to implement localized stop gap maintenance (i.e. Asphalt Zipper type R&R deep patching, leveling courses, crack sealing, etc.) prior to any major slurry seal maintenance and/or overlay rehabilitation. By performing stop gap measures to individual pavement sections the overall performance of a sections condition will improve over time and will create a longer life-cycle than if no preventive maintenance was performed.

DEFERRED MAINTENANCE

Delaying repairs on streets where pavement condition indicates a need creates deferred maintenance. Deferred maintenance includes pavement maintenance / rehabilitation that is needed across the entire network, but cannot be performed due to the lack of available funding and is pushed to the next budget cycle. The actual repairs that are being deferred are often referred to as a “backlog”.

As maintenance is deferred, the opportunity to apply life extending preventive pavement applications is lost and the ultimate cost of rehabilitation multiples. Currently, the identified \$28.9 million of deferred slurry, overlay and reconstruction M&R on the Redlands network consists of 26% preventative maintenance and 74% rehabilitation / reconstruction.

INCREASE PCI PROGRAM (FIVE YEAR MODEL)

With the City striving to show proactive maintenance across all City pavements, a budget program was generated to show the greatest return on investment through the application of slurry seal, grind & overlay and Full Depth reclamation. Our goal under this model is to increase the network weighted PCI to 84 after five years. This model will demonstrate the necessary funding to achieve this goal.

Again, we used the “\$25.4 Million/yr” 5-yr PMP model (shown above) as a cornerstone for our modeling within the “Increase PCI” program. Combining the previous reporting model with a realistic and achievable annual budget, we found positive results.

The “Increase PCI” program incorporates pavement sections that have a functional class of Arterial (PR, C) and Local (R).

Plan Year	PCI	Prev / Slurry Seal	AC Overlay/Recon	Total Funded \$	Deferred Maintenance
Current	82.0	~	~	~	\$28,996,200
2019-20	84.6	\$0	\$8,496,200	\$8,496,200	\$20,715,400
2020-21	84.4	\$532,100	\$5,717,300	\$6,249,400	\$17,789,500
2021-22	84.1	\$1,450,300	\$4,793,400	\$6,243,700	\$14,515,600
2022-23	84.2	\$1,121,900	\$5,122,600	\$6,244,500	\$10,944,100
2023-24	84.2	\$5,062,200	\$1,183,700	\$6,245,900	\$10,999,800
		\$8,166,500	\$25,313,200	\$33,479,700	

Table 10 – Necessary Annual Funding to Increase PCI to 84

Referring to Table 10, it is noted that the weighted PCI increases proactively through the five-year projection (82.0 to 84.2). Additionally, the annual deferred maintenance total decreases from \$28.9 million to \$10.9 million at the end of the five-years (this equates to a 62% decrease). If the City utilizes an average annual budget of \$6,695,900/yr for slurry maintenance and overlay / reconstruction rehabilitation as shown above, the City will be able to “increase” the conditions and will see a “substantial decrease” in the amount of deferred maintenance (majority is overlay rehabilitation/reconstruction). If this model was extended to a 10-yr projection we would see a lowering in the overall deferred maintenance (approx. \$6 million by FY 2029).

We recommend that a stronger focus be placed on the Local network improvements due to the simple fact that the Local network currently has lower overall conditions compared to the arterials. We still recommend consistent annual maintenance/rehabilitation to the arterial network, i.e. localized patching, ARHM through the use of awarded SB1, PARIS and Measure I funds. But again, with the Local network showing a higher degree of negative results, a renewed focus for neighborhood area maintenance and proactive overlays should be continued.

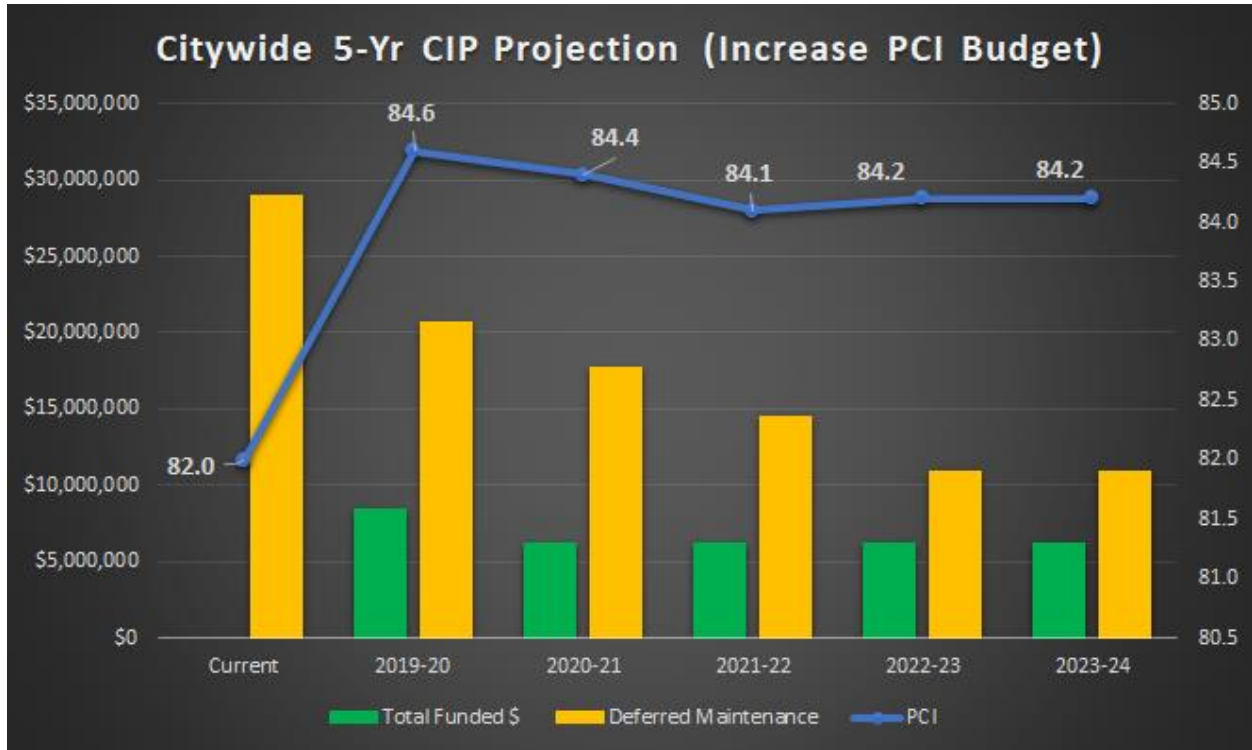

Figure 5 – Resulting Network PCI (Increase PCI Budget)

The Local maintenance model that has been developed under the “Increase PCI” budget can be used as a benchmark to monitor the City’s annual budget allocations as the network continues to mature and age; the proper amount of funding for overlay rehabilitation needs to be the City’s highest priority (these recommendations are shown within the Section IV Forecast Maintenance Report).

CONSTRAINED PROGRAM (FIVE YEAR MODEL)

With the previous two M&R strategies shown above we have demonstrated how the City’s projected “Actual” budget performs and what level of funding is necessary to “Increase the PCI to 84”. Our goal under this model is to what a “constrained” annual budget would do to the Redlands network after a five-year program. This model will demonstrate the necessary funding to decrease the weighted PCI to a level of 79.

We used the two previous models (shown above) as the basis for our modeling within the “constrained” program. The “Constrained” program incorporates pavement sections that have a functional class of Arterial (PR, C) and Local (R).

Plan Year	PCI	Prev / Slurry Seal	AC Overlay/Recon	Total Funded \$	Deferred Maintenance
Current	82.0	~	~	~	\$28,996,200
2019-20	84.6	\$0	\$8,496,200	\$8,496,200	\$20,715,400
2020-21	83.2	\$532,100	\$1,739,000	\$2,271,100	\$21,005,400
2021-22	82.0	\$1,450,300	\$925,400	\$2,375,700	\$22,751,900
2022-23	80.7	\$1,121,900	\$1,275,500	\$2,397,400	\$24,223,600
2023-24	79.1	\$2,271,600	\$2,176,600	\$4,448,200	\$26,597,000
		\$5,375,900	\$14,612,700	\$19,988,600	

Table 11 – Constrained Annual Funding

Referring to Table 11, it is noted that the weighted PCI decrease through the five-year projection (82.0 to 79.1). The annual deferred maintenance total decreases from \$28.9 million to \$26.6 million at the end of the five-years (this equates to a 8% decrease). If the City utilizes an average annual budget of \$3,997,700/yr for slurry, overlay, and reconstruction M&R as shown above, the City will be incur greater operations & maintenance debt.

Once the City has performed the last remaining PARIS pavement rehabilitation projects (spring 2020) the City should consider improving upon the Local slurry maintenance “neighborhood” strategies for several reasons. First, preventive maintenance applications applied five plus (5+) years after rehabilitation, like those throughout our report, will help to sustain current high level of condition while reducing annual expenditures. Secondly, with a citywide maintenance neighborhood methodology established, four beneficial impacts occur:

- 1) Planned / Maintenance areas are addressed through a multi-yr maintenance cycle which creates a dedicated project schedule for City staff and constituent inquiries;
- 2) Deferred overlay rehabilitation can be addressed in a more effective manner due to accrued savings of revenues (reduced construction logistical costs, volume-based costs, etc.)
- 3) A preventive maintenance strategy is more cost-effective in a long-term PMP rather than implementing a maintenance approach that addresses only the “worst-first” streets.
- 4) All maintenance alternatives are available due to the increased funding and focused maintenance per year.

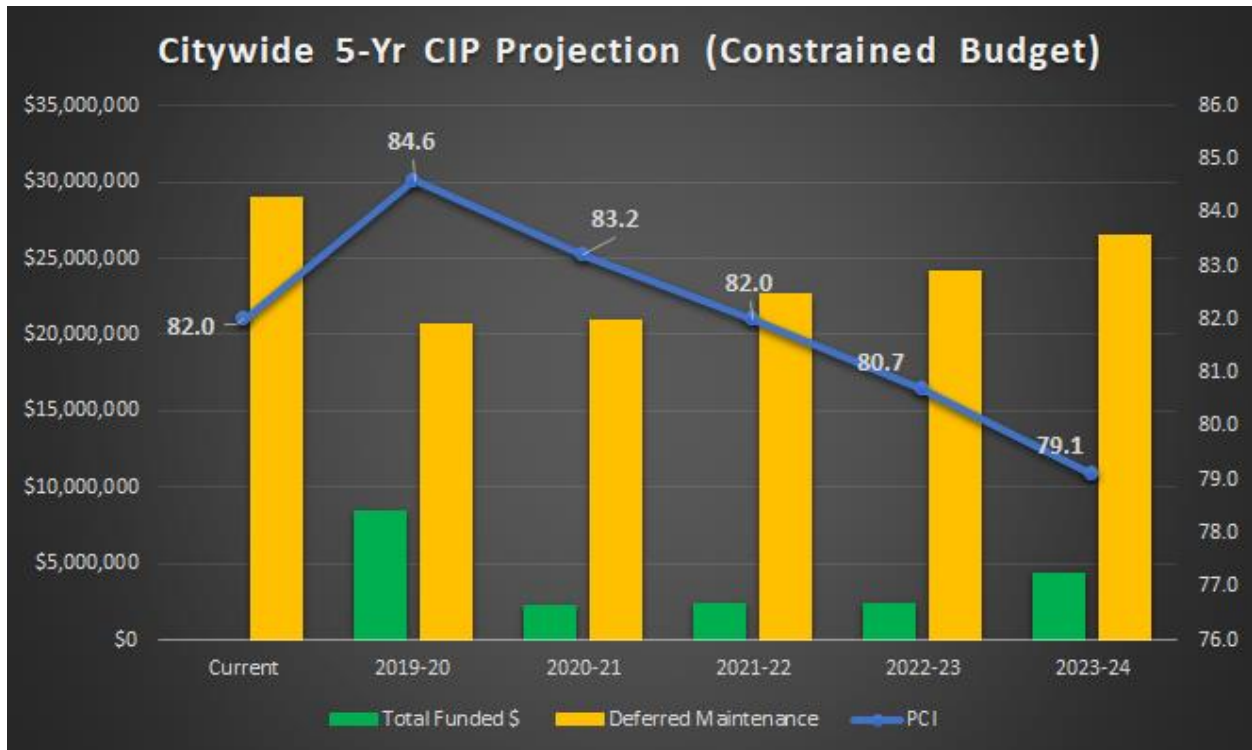

Figure 6 – Resulting Network PCI (Constrained Budget)

Again, it is recommended that the City continue to monitor the deterioration rates for the applications of FDR, Grind & Overlay and Type II slurry seal to ensure the City is generating the greatest return-on-investment and extend life-cycles; this should be done through frequent inspections, biennial updates to this report and deterioration studies.

PAVEMENT MANAGEMENT PROGRAM REPORTS

In addition to the annual budget scenario, this report contains a comprehensive and complementary assemblage of pavement management reports ranging from summary reports to annual maintenance and rehabilitation schedules (Forecasted Maintenance Report, Section IV). Collectively as well as individually, the reports represent reasonable projections of pavement maintenance needs and performance based on visual condition assessments, unit cost estimates, and pavement deterioration models.

It is important to note that pavement segment dimensions and surface area (recorded during 2000-06 inspections), along with the action and repair costs, as presented within reports are accurate within tolerable limits. This is noteworthy due to the "implied" accuracy of reporting length and width to the nearest foot, true section area to the nearest square foot, and action and repair unit costs and project estimates to the nearest penny and dollar, respectively.

Network street maps have been included to represent several thematic categories:

- 2019 Citywide Pavement Condition Index (PCI) map;

NEXT STEPS

As with any infrastructure management software program, time investments need to be made by key Public Works staff to maintain the integrity of the data as well as its accuracy. This will be key to future staff management of the pavement program and reporting. City personnel need to maintain their commitment to the preventive maintenance system, while working toward reducing the City's present backlog of rehabilitation projects.

In order to ensure that report outputs are accurate and credible, it is essential that the integrity of all data files be maintained. This will require performing all necessary updates when changes are made to scheduling scenarios, unit cost information, historical data, etc. In addition, the entire pavement network will have to be re-inventoried at regular intervals. This will not only allow work to be scheduled based on the most current condition data available, but will provide City personnel with a means to monitor actual rates of pavement deterioration so appropriate modifications can be made to the system curves.

Bucknam will be supporting the City with staff level support to assist in the continuous updates with the MicroPAVER system. This will include work history updates, generating reports from the system, unit cost updates, and future inspections.

CONDITION DISTRIBUTION REPORT

This report depicts the distribution of the pavement condition throughout the street network by a specific rank and its given area.

The condition scheme ranges from “Very Good” to “Very Poor”, with an “Very Good” condition corresponding to a pavement at the beginning of its life cycle, and a “Very Poor” condition representing a badly deteriorated pavement with virtually no remaining life.

The table below shows the general description for each pavement condition:

Condition Description – PCI Range - Description

Condition Description	PCI Range	Description
Very Good	86-100	Minor to low distress, no significant distress; Low severity distresses with expectation of utility patches in good condition or slight hairline cracks; minor weathering found
Good	75-85	Slight to moderately weathered, low to moderate distress severities, utility patching commonly found; moderate distress extents
Fair	60-74	Severely weathered or moderate levels of distress, generally limited to utility patching and climate related distress
Poor	41-59	Moderate to high distresses including load related types such as alligator cracking, greater distress extents
Very Poor	0-40	Severely distresses, large quantities of distortion or alligator cracking; Failure of the pavement, distress has surpassed tolerable rehabilitation limits

CALCULATION OF PCI

In order to calculate a Pavement Condition Index (PCI) value within MicroPAVER, specific street section data needs to be inputted into MicroPAVER to define the survey limits, asphalt types, pavement age and metrics.

Pavement “sections” are pavement segments within the defined branch that have consistent pavement rankings, construction/maintenance histories and use. Representative inspection samples are then selected and visually surveyed to locate distress data. This data is used to calculate the pavement sections Pavement Condition Index (PCI) which includes distress type, extent of the distress and its severity.

The PCI is a condition rating that ranges from 100 (pavement section that is in perfect condition) to 0 for a section that has structurally failed and deteriorated dramatically. The PCI is calculated from three major data entries from our inspectors:

1. Distress Type (one of 20 AC or 19 PCC types shown on the MicroPAVER inspection forms)
2. Distress Quantity (the square footage, length or count of a specific distress)
3. Distress Severity (the level of severity determined for each distress found; low, medium or high)

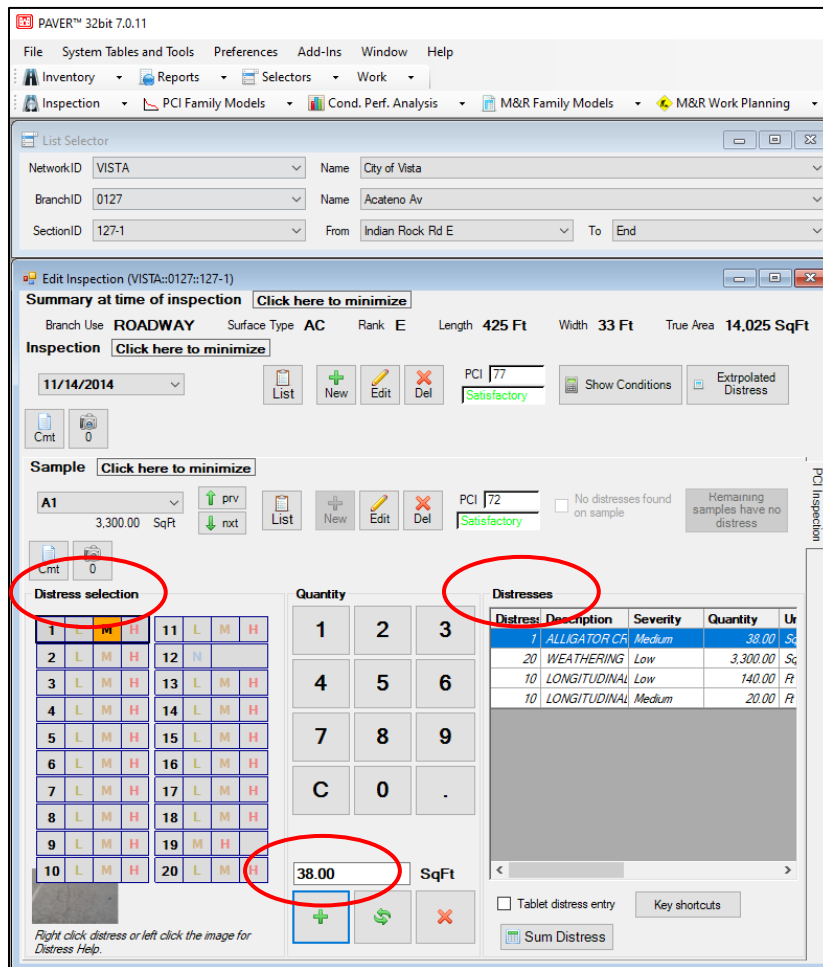

Figure 7 – PCI Calculation Worksheet

The PCI is a condition rating that ranges from 100 (pavement section that is in perfect condition) to 0 for a section that has structurally failed and deteriorated dramatically. Weighted average PCI of a given area/zone = pavement section PCI * its area / by the total square footage of the given area/zone. Weighted average PCI of a given area/zone = pavement section PCI multiplied by its area then divided by the total square footage of the given area/zone.

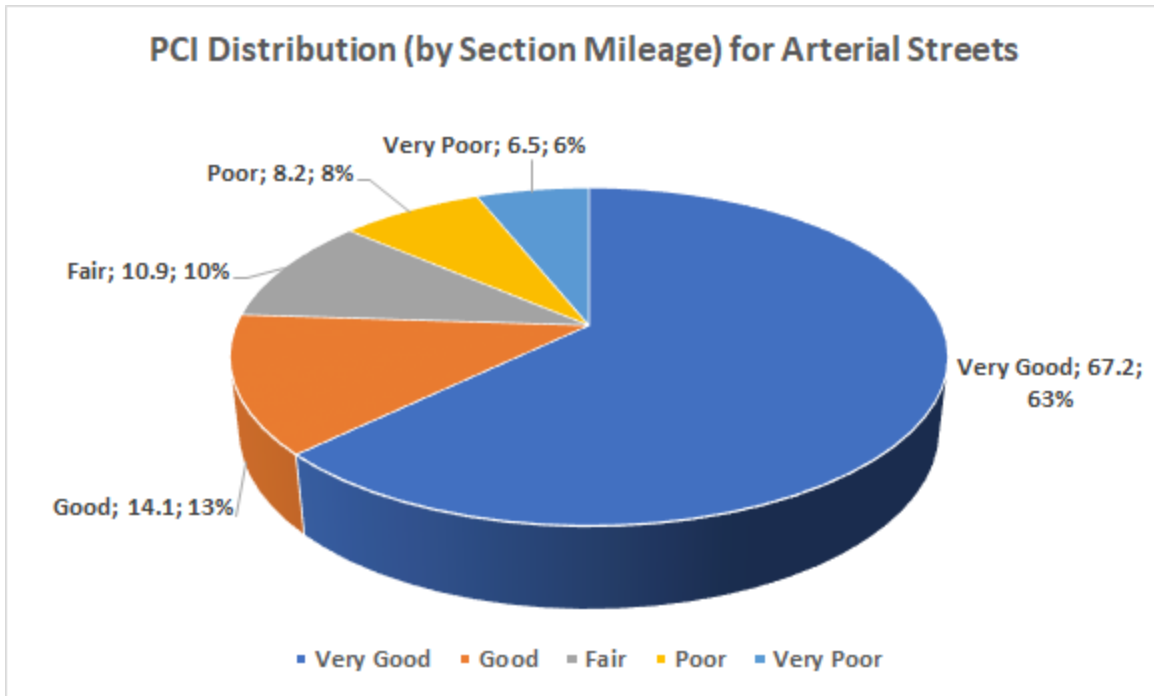

Figure 8 – Arterial / Collector Condition Distribution

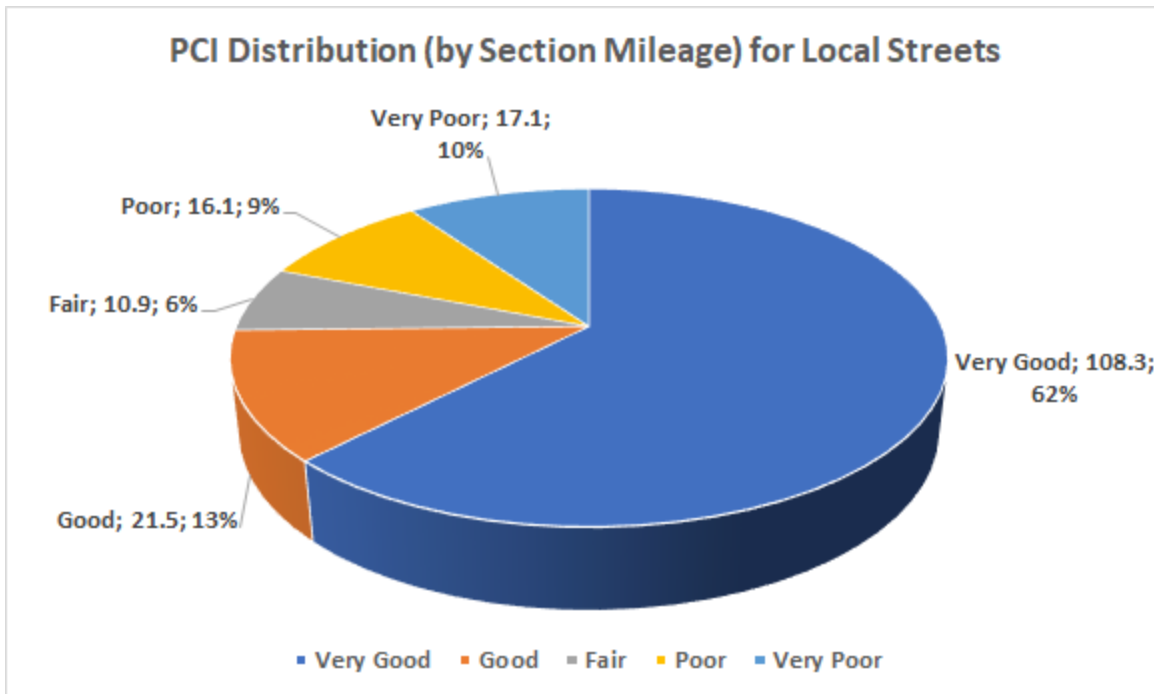

Figure 9 – Local Condition Distribution

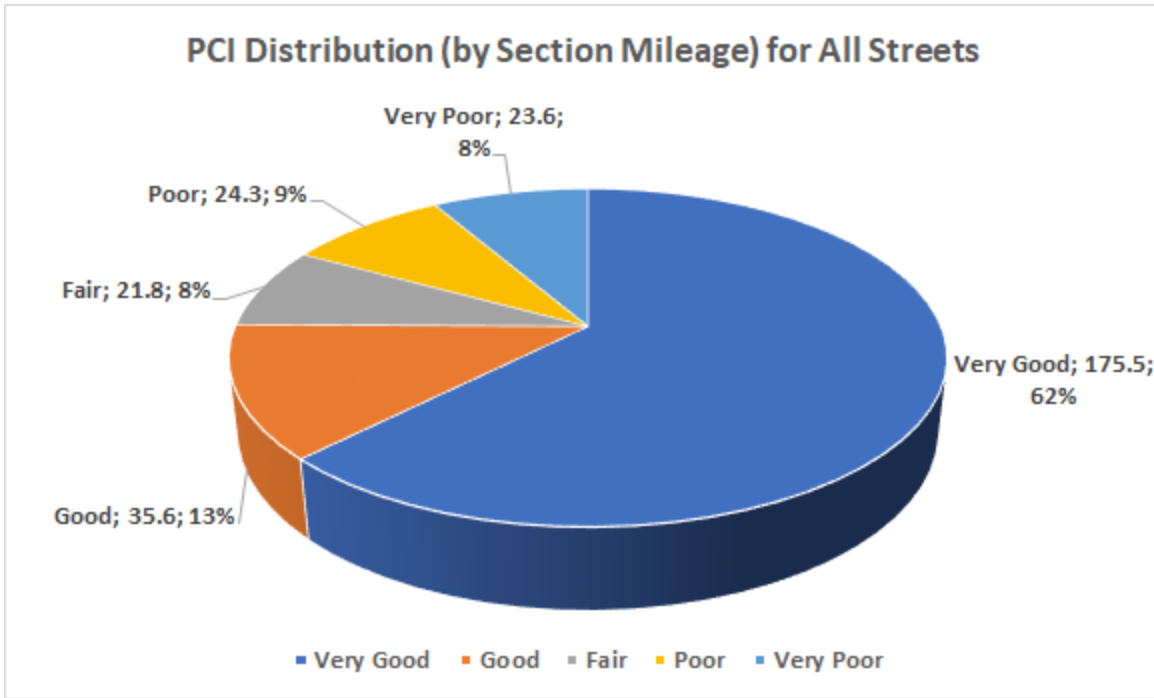

Figure 10 – Citywide Condition Distribution

SAMPLE DISTRESS PHOTOS – RECOMMENDED TREATMENT

Bucknam Infrastructure Group

1. Alligator Cracking

Cracks that form a chicken wire or alligator scale like pattern.

Low Severity: Thin parallel longitudinal cracks that may come together at certain points, but full alligator pattern is not present yet.

Medium Severity: Further development of cracks into alligator pattern. Cracks are starting to spall.

High Severity: Alligator pattern is heavily developed, and cracks are spalled to the point where individual pieces may become separated.

Typical Recommendation: Low severity, R&R – Patching, crack sealing; high severity R&R-overlay

2. Bleeding

Bleeding occurs when incorrectly mixed asphalt is applied and in hot weather the asphalt or tar rises to the surface.

Severity is determined by the amount of asphalt/tar present.

Typical Recommendation: Low severity, apply coarse sand; high severity, grind or heat planer excess, resurfacing may be necessary

3. Block Cracking

Longitudinal and transverse cracks that intersect to form smaller than 10x10 ft blocks. Creates uniform blocks with straight edges.

Low Severity: Cracking is less than 3/8 inches.

Medium Severity: Cracking between 3/8 and 3 inches.

High Severity: Cracking is over 3 inches.

Typical Recommendation: Low severity, crack sealing; high severity, R&R-overlay

4. Bumps and Sags

Small, localized, and linear upward or downward displacements of pavement, which can be caused by a variety of factors.

Severity is determined by the extent to which ride quality is diminished.

Typical Recommendation: R&R - Patching

5. Corrugation

Closely spaced Bumps and or Sags that form a washboard effect in the pavement.

Severity is determined by the extent to which ride quality is diminished.

Typical Recommendation: Low severity, R&R – Patching; high severity, R&R-overlay

6. Depression

Localized area of pavement with a lower elevation than the surrounding pavement.

Low Severity: depth of ½ to 1 inch.

Medium Severity: depth of 1 to 2 Inches.

High Severity: depth greater than 2 inches.

Typical Recommendation: R&R - Patching

7. Edge Cracking

Cracks that are parallel to the edge of the pavement that may cause a break up of pavement.

Low Severity: Low or Medium cracking with no breakup.

Medium Severity: Medium cracking with some breakup.

High Severity: Considerable breakup of pavement.

Typical Recommendation: R&R - Patching

8. Joint Reflective Cracking

Cracking that is reflected through AC pavement when it is overlaid on top of PCC pavement.

Low Severity: Cracking is less than 3/8 inches.

Medium Severity: Cracking between 3/8 and 3 inches.

High Severity: Cracking is over 3 inches.

Typical Recommendation: R&R - Overlay

9. Lane / Shoulder Drop-off

Elevation change between pavement and shoulder.

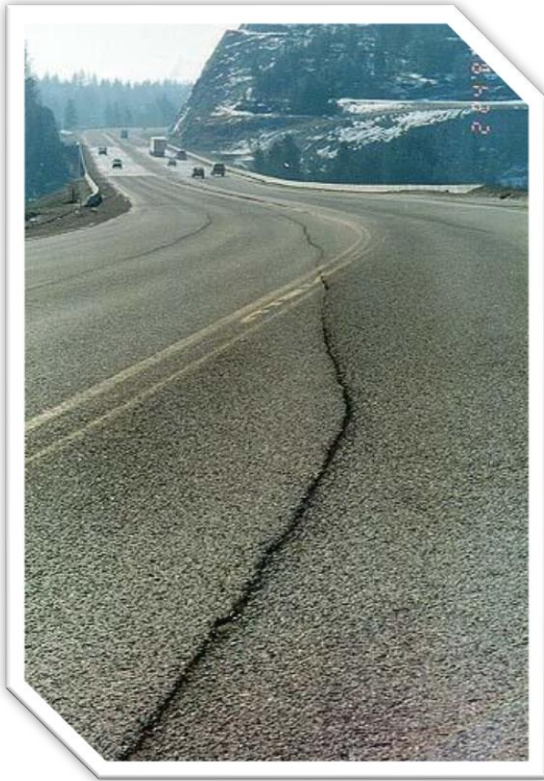

Low Severity: Difference in elevation is between 1 and 2 inches.

Medium Severity: Difference in elevation is between 2 and 4 inches.

High Severity: Difference in elevation is over 4 inches.

Typical Recommendation: R&R – Patching or edge grinding

10. Linear & Transverse Cracking

Cracks that are generally either parallel or perpendicular to traffic.

Low Severity: Cracking is less than 3/8 inches.

Medium Severity: Cracking is between 3/8 and 3 inches.

High Severity: Cracking is over 3 inches.

Typical Recommendation: Low severity, crack sealing; high severity, R&R - Overlay

11. Patching

Area of pavement that has been replaced.

Severity is determined by the quality of the patch and the extent to which ride quality is diminished.

Typical Recommendation: R&R – structural / non-structural overlay

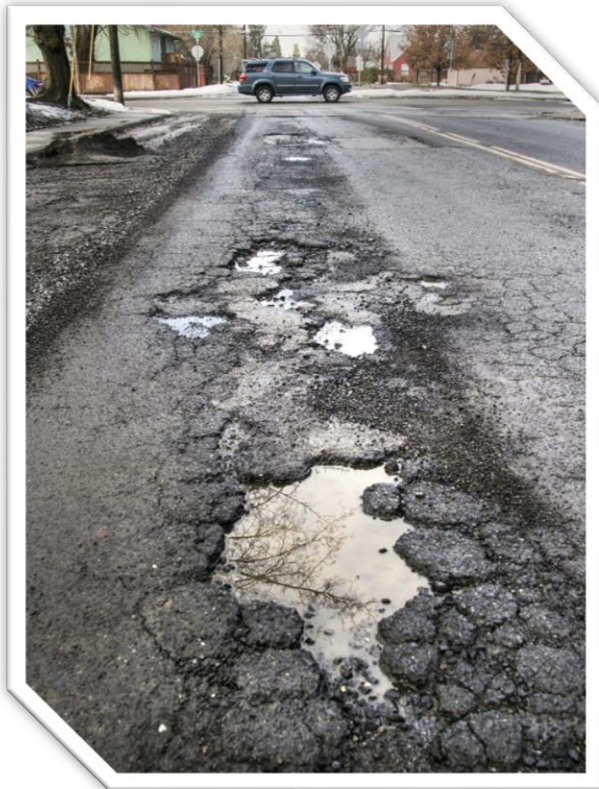

12. Polished Aggregate

Distress where traffic smooths the pavement surface so friction is diminished and cars can slide.

There are no Severity Levels for this distress.

13. Pothole

Severity Measured using the following Matrix.

Maximum Depth Of Pothole (in.) (mm)	Average Diameter (in.) (mm)		
	4 to 8 in. (100 to 200 mm)	8 to 18 in. (200 to 460 mm)	18 to 30 in. (460 to 760 mm)
1/2 to ≤ 1 in. (13 to 25 mm)	L	L	M
> 1 to ≤ 2 in. (25 to 50 mm)	L	M	H
> 2 in. (50 mm)	M	M	H

Typical Recommendation: low severity Pothole fill or R&R – Patching, high severity should be R&R-Overlay

14. RR Crossing

Pavement distresses caused by railroad crossings.

Severity is determined by the extent to which ride quality is diminished.

Typical Recommendation: R&R - Patching

15. Rutting

Linear depressions along wheel paths caused by traffic.

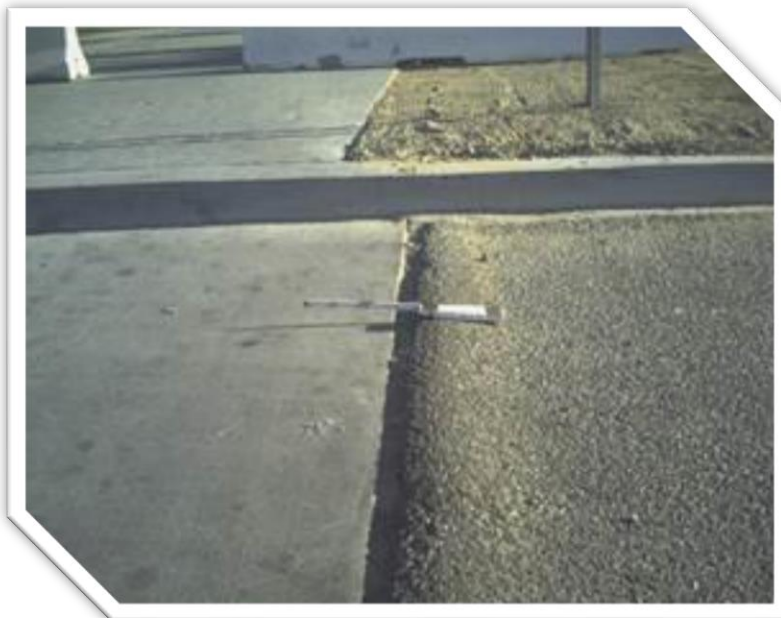

Low Severity: Depth is $\frac{1}{4}$ to $\frac{1}{2}$ inches.

Medium Severity: Depth is $\frac{1}{2}$ to 1 inch.

High Severity: is greater than 1 inch.

Typical Recommendation:
Pavement with deeper ruts should be leveled and overlaid

16. Shoving

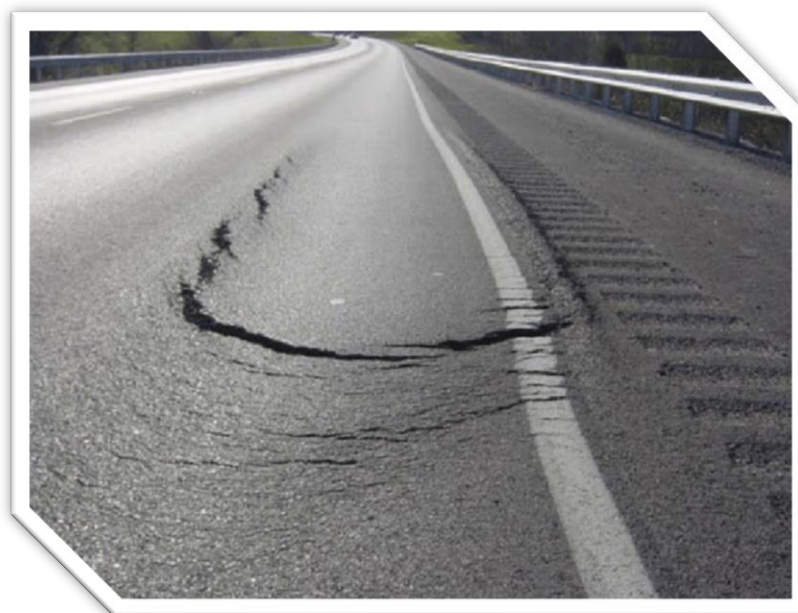

Displacement of pavement creating a “wave” over a more solid surface.

Severity is determined by the extent to which ride quality is diminished.

Typical Recommendation: R&R - Patching

17. Slippage Cracking

Half-moon shaped cracks where wheels cause pavement to slide.

Low Severity: Average crack width is less than 3/8 inch.

Medium Severity: Crack width is between 3/8 and 3/2 inches.

High Severity: Crack width is greater than 3/2 inches.

Typical Recommendation: R&R - Patching

18. Swell

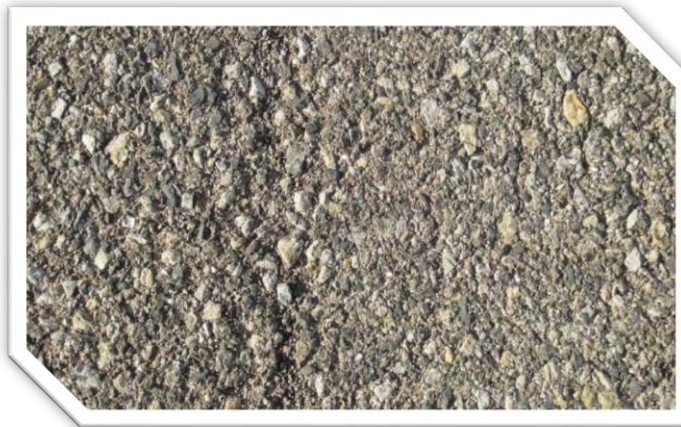

Upward Bulges creating “wave-like” patterns.

Severity is determined by the extent to which ride quality is diminished.

Typical Recommendation: Low severity, R&R – Patching; high severity, R&R-overlay

19. Weathering

The wearing away of the asphalt binder.

Low Severity: Aggregate is starting to be exposed.

Medium Severity: Aggregate is exposed up to ¼ of its width.

High Severity: Aggregate is exposed to greater than ¼ of its width.

Typical Recommendation: naturally occurring, slurry seal

20. Raveling

The further weathering of asphalt so that coarse aggregate is separating out of pavement.

Medium Severity: Considerable loss of aggregate.

High Severity: Almost complete removal of coarse aggregate.

Typical Recommendation: Low severity, R&R – Patching; high severity, R&R-overlay

PAVEMENT CONDITION INDEX REPORT

Listed alphabetically by street name or PCI, this report provides the City with a listing of pertinent inventory and pavement condition data for each inventory unit within the City's pavement network. The Pavement Condition Index (PCI) Report notes the names, limits, classification, dimension, surface type, and lane configuration of each inventory unit. Detailed descriptions of the information appearing on this report are presented below:

BRANCH NAME - The name of each inventory unit appears in this column. Generally, the inventory unit name is taken directly from a street sign; however, where no street signs are posted, the name appearing on the network map is noted instead. A sample set of street name suffix abbreviation definitions is presented below:

AV - Avenue	CT - Court	CIR - Circle	BLVD - Boulevard
DR - Drive	LN - Lane	RD - Road	HWY – Highway
ST - Street	WY - Way	EB - East Bound	F - Frontage
NB - North Bound	SB - South Bound	WB - West Bound	TER – Terrace
PL - Place			

FROM - A description of the beginning limit of each inventory unit appears in this column. If the beginning limit exists between intersections, then the beginning limit description may be an address, post mile marker, or a distance from a known point of reference (e.g., "500' N/MAIN ST").

TO - A description of the ending limit of each inventory unit appears in this column. Like BEGIN limit, the END limit description may consist of a street name, an address, or a distance from a known point of reference. In the case of cul-de-sacs, or dead-ends, the END limit consists of an address, or a directional reference, such as "NORTH END," when no address is available.

RANK - The codes for the four (4) functional classifications as the inventory unit appears in this column, are represented below. Basically, units are classified according to traffic volume.

<u>CODE</u>	<u>DESCRIPTION</u>
PR	Primary Arterial
C	Collector
R	Residential
I	Industrial

SURFACE - A code was assigned to each inventory unit to describe surface type.

<u>CODE</u>	<u>DESCRIPTION</u>
AC	Asphalt Concrete
AAC	Asphalt Concrete over Asphalt Concrete (work history event)
PCC	Concrete

LENGTH - The length of the section within each branch.

UNITS - The unit of measurement for the section length, typically linear feet (LF).

AREA - The area of each section within a branch.

UNITS - The unit of measurement for the section area, typically square feet (SF).

PCI - Pavement Condition Indices were calculated for inventory units based on severity and extent of distress manifestations observed within the inventory unit. Ranging between 0 and 100, a PCI of "100" corresponds to a pavement at the beginning of its life cycle, while a PCI of "0" corresponds to a badly deteriorated pavement which is at or near the end of its life cycle.

PCI CLIMATE, LOAD AND OTHER – reflects “Section Extrapolated Distress”; these values are shown within the Sample Distresses tab within the PCI window. Distresses are aggregated based on the type and severity level. For random samples, distress quantities are adjusted to reflect the extrapolated value based on the sections total area. Extrapolated distress deducts are classified as resulting from Climate, Load and Other distresses. The Distress Classification portion of the tab shows the “percent” of extrapolated distress deduct belonging to Climate, Load and Other (these %’s are shown within the PCI reports herein). These values are beneficial in that they support the decision whether recommend slurry seal, overlay or reconstruction project for street sections.

INSPECTION DATE – Represents the most recent inspection date performed on a given sections. PCI shown is historical in value and may not indicate what “today’s” PCI is due to variance in time. Pavement deterioration calculations can be performed on a section(s) to demonstrate a deteriorated PCI based upon a new current date.

SECTION IV
FORECASTED MAINTENANCE REPORT

- A. Recommended Arterial (2019/20-2024/25) - Spreadsheet
- B. Recommended Local (2019/20-2024/25) - Spreadsheet

This page intentionally left blank

FORECASTED MAINTENANCE REPORT

Section by section street listing sorted by street classification, plan year then alphabetically; this report presents the year and action corresponding to the next scheduled work activity for specific segments within the pavement network. Sections not shown are considered as deferred maintenance.

INCREASE PCI BUDGET – An “increase” budget was generated for the City to demonstrate the necessary annual funding required to increase the weighted PCI level to a level of 84 after five years.

We have sorted the following report by street classifications for easy review (Arterial – Local, A to Z order).

The annual projected revenues shown below only account for the cost of pavement maintenance and rehabilitation activities. A 30% contingency was applied to the Arterial / Collector and Local pavement unit costs.

In general sections are chosen first and foremost on available budget; secondly, the square footage of each section plays a large factor. The software initially chooses the draft sections that will increase PCI, sustain PCI or slow PCI deterioration within the budgeted timeframe. Additionally, the types of distress, extents of distress and severities of distress (high, medium, low) also determine how sections are/can be selected.
