Redlands, California 92374

**November 2022**

**\*Revised March 2024**

## MANAGEMENT SUMMARY

Diversified Pacific, Inc. retained ECORP Consulting, Inc. in 2022 to conduct a cultural resources inventory for the Tennessee Village Project in Redlands, San Bernardino County, California. The project proponent is to construct a mixed-use residential and commercial complex on currently vacant land.

The inventory included a records search, literature review, historical society outreach, and field survey. The records search results indicated that one previous cultural resources study has been conducted within the Project Area, but only 5 percent of the Project Area had been surveyed. As a result of those studies, no resources have previously been recorded within the Project Area.

As a result of the field survey, ECORP recorded one resource inside the Project Area, LPA-003, a historic water conveyance system consisting of six features **REDACTED**.

This resource has been evaluated using the National Register of Historic Places (NRHP), California Register of Historical Resources (CRHR), and City of Redlands Historic Resource list eligibility criteria. This resource does not meet the requirements for eligibility for inclusion in the NRHP, CRHR, or as a City of Redlands Historic Resource and is, therefore, not considered a historical resource under the California Environmental Quality Act. Recommendations for the management of unanticipated discoveries are also provided.

## **1.0 INTRODUCTION**

Diversified Pacific retained ECORP Consulting, Inc. in 2022 to conduct a cultural resources inventory of the Proposed Project Area located in the City of Redlands in San Bernardino County, California. A survey of the property was required to identify potentially eligible cultural resources (i.e., archaeological sites and historic buildings, structures, and objects) that could be affected by the Project.

### **1.1 Project Location and Project Description**

The Project Area consists of approximately 13.65 acres of property located in the southern half of the northeastern quarter of Section 21 of Township 1 South, Range 3 West, San Bernardino Base and Meridian as depicted on the 1988 (photorevised 1996) Redlands, California U.S. Geological Survey (USGS) 7.5-minute topographic quadrangle map (Figure 1). It is also known as Assessor's Parcel Number (APN) 0167-171-150-000. The parcel is east of Tennessee Street, and is surrounded by undeveloped land between Lugonia Avenue, Karon Street, and San Bernardino Avenue. The Proposed Project entails the construction of a mixed-use residential and commercial development located at Lugonia Avenue and Tennessee Street.

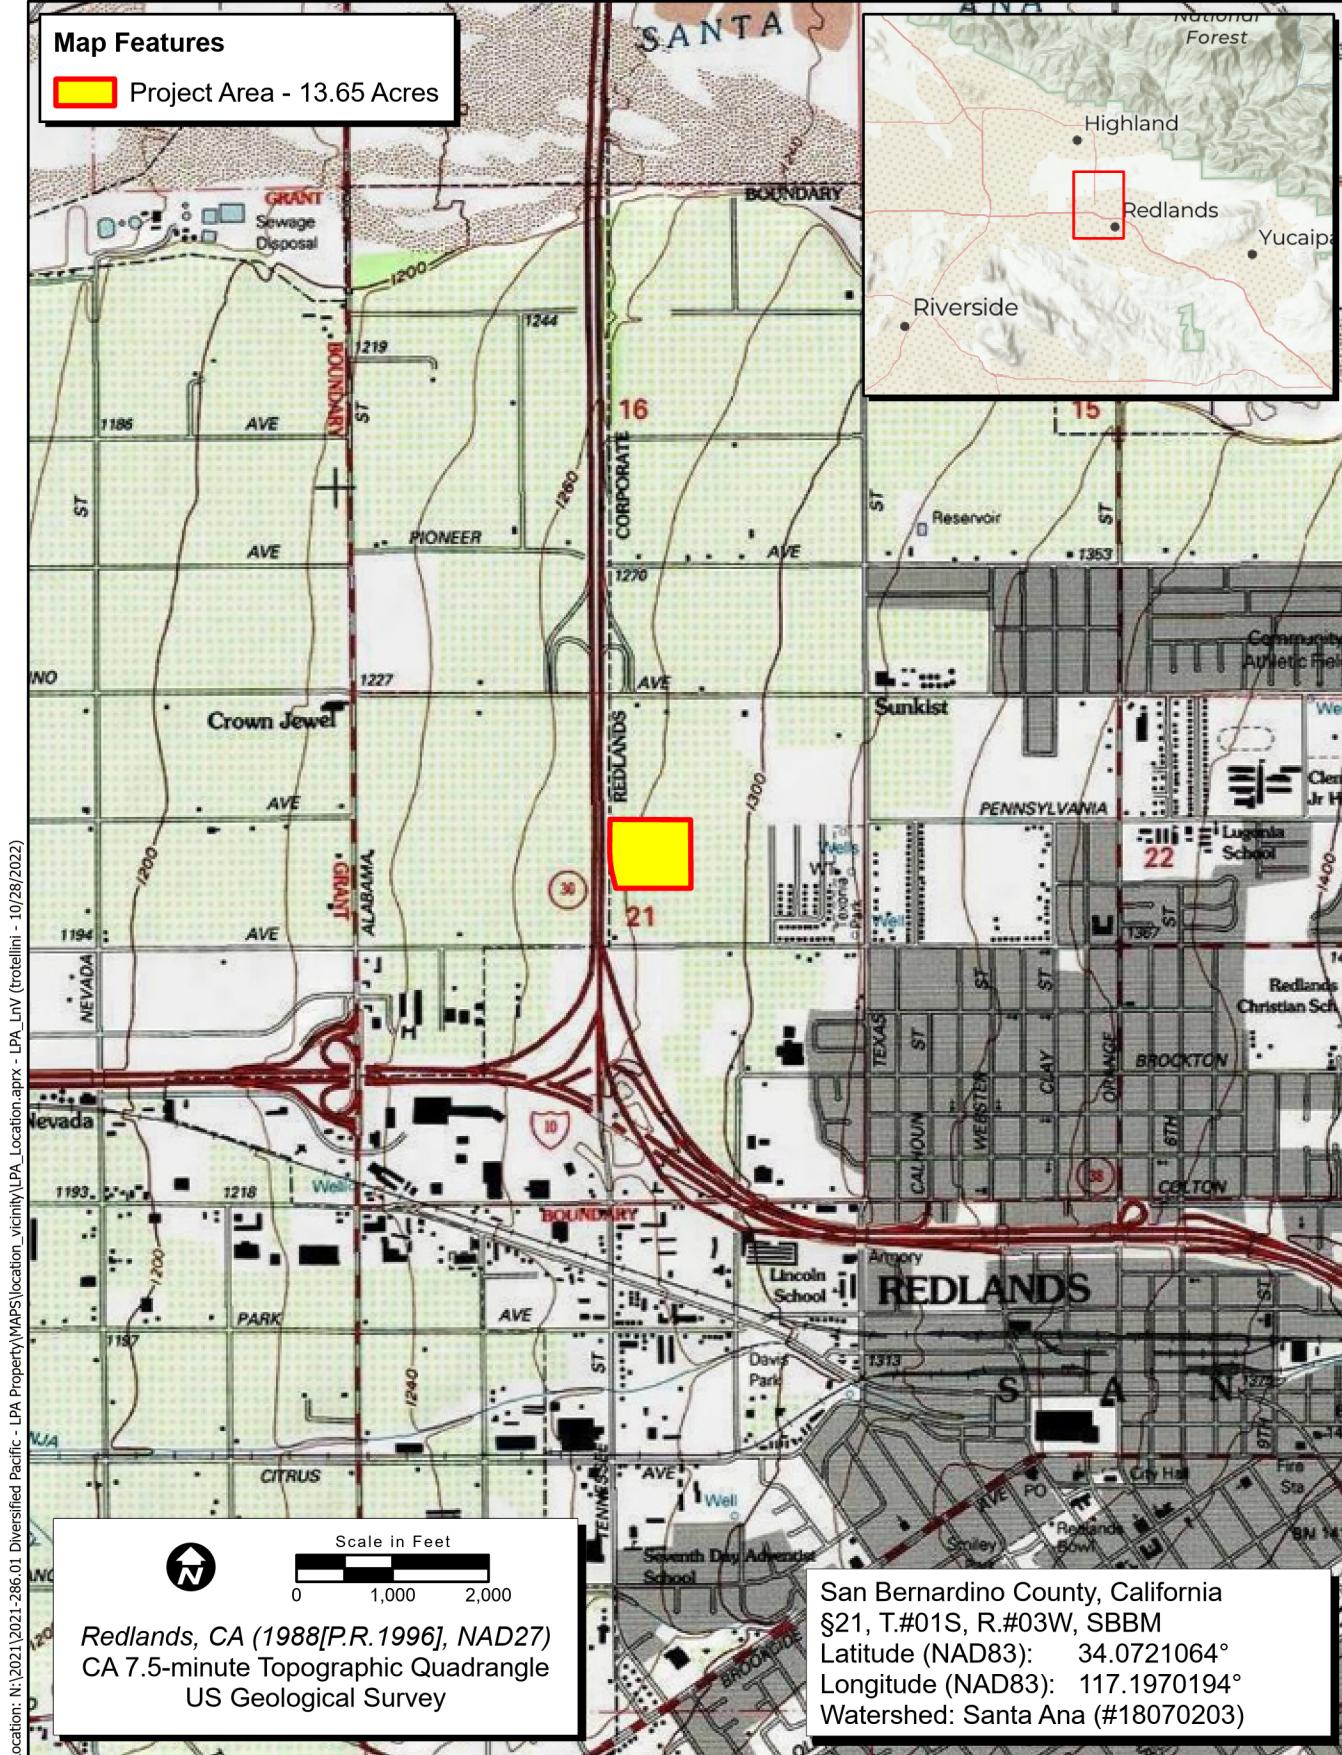

### **1.2 Area of Potential Effects**

The Area of Potential Effects (APE) consists of the horizontal and vertical limits of a project and includes the area within which significant impacts or adverse effects to Historical Resources or Historic Properties could occur as a result of the project. The APE is defined for projects subject to regulations implementing Section 106 (federal law and regulations). For projects subject to the California Environmental Quality Act (CEQA) review, the term Project Area is used rather than APE. The terms Project Area and APE are interchangeable for the purpose of this document.

The horizontal APE consists of all areas where activities associated with a project are proposed and, in the case of this Project, equals the Project Area subject to environmental review under the National Environmental Policy Act (NEPA) and CEQA. This includes areas proposed for construction, vegetation removal, grading, trenching, stockpiling, staging, paving, and other elements in the official Project description. The horizontal APE is illustrated on Figure 1. It measures approximately 884 feet in length by 724 feet in width.

The vertical APE is described as the maximum depth below the surface to which excavations for project foundations and facilities will extend. Therefore, the vertical APE for this Project includes all subsurface areas where archaeological deposits could be affected. The subsurface vertical APE varies across the Project, and therefore, a review of geologic and soils maps was necessary to determine the potential for buried archaeological sites that cannot be seen on the surface. This study assumes ground disturbance will not exceed 20 feet below surface.

The vertical APE also is described as the maximum height of structures that could impact the physical integrity and integrity of setting of cultural resources, including districts and traditional cultural properties. This study assumes the above-surface vertical APE is 50 feet.

Map Date: 10/28/2022

## 1.3 Regulatory Context

A review of the regulatory context is provided below; however, the inclusion of any of these laws and regulations in this report does not make a law or regulation apply when it otherwise would not. Similarly, the omission of any other laws and regulations from this section does not mean that they do not apply. Rather, the purpose of this section is to provide context in explaining why the study was carried out in the manner documented herein. Although both federal and state regulatory contexts are provided, it should be noted that the Project is currently subject only to the state regulatory framework with the City of Redlands serving as Lead Agency.

### 1.3.1 National Environmental Policy Act

National policy for the protection and enhancement of the environment is established by NEPA. Part of the function of the federal government in protecting the environment is to "preserve important historic, cultural, and natural aspects of our national heritage." Cultural resources need not be determined eligible for the National Register of Historic Places (NRHP) through the National Historic Preservation Act (NHPA) of 1966 (as amended) to receive consideration under NEPA. Regulations of the Council on Environmental Quality (40 Code of Federal Regulations [CFR] 1500-1508) implement NEPA.

The definition of *effects* in the NEPA regulations includes adverse and beneficial effects on historic and cultural resources (40 CFR 1508.8). Therefore, the *Environmental Consequences* section of an Environmental Impact Statement [40 CFR 1502.16(f)] must analyze potential effects to historic or cultural resources that could result from the proposed action and each alternative. In considering whether an alternative may "significantly affect the quality of the human environment," a federal agency must consider, among other things:

- Unique characteristics of the geographic area, such as proximity to historic or cultural resources (40 CFR 1508.27(b)(3)), and
- The degree to which the action may adversely affect districts, sites, highways, structures, or objects listed in or eligible for listing in the NRHP (40 CFR 1508.27(b)(8)).

Therefore, because historic properties are a subset of *cultural resources*, they are one aspect of the *human environment* defined by NEPA regulations.

### 1.3.2 National Historic Preservation Act

The federal law that covers cultural resources that could be affected by federal undertakings is the NHPA of 1966, as amended. Section 106 of the NHPA requires that federal agencies take into account the effects of a federal undertaking on properties listed in or eligible for the NRHP. The agencies must afford the Advisory Council on Historic Preservation (AChP) a reasonable opportunity to comment on the undertaking. A federal undertaking is defined in 36 CFR 800.16(y):

"A federal undertaking means a project, activity, or program funded in whole or in part under the direct or indirect jurisdiction of a federal agency, including those carried out by

or on behalf of a federal agency; those carried out with Federal financial assistance; and those requiring a Federal permit, license, or approval."

The regulations that stipulate the procedures for complying with Section 106 are in 36 CFR 800. The Section 106 regulations require:

- definition of the APE;
- identification of cultural resources within the APE;
- evaluation of the identified resources in the APE using NRHP eligibility criteria;
- determination of whether the effects of the undertaking or project on eligible resources will be adverse; and
- agreement on and implementation of efforts to resolve adverse effects, if necessary.

The federal agency must seek comment from the State Historic Preservation Officer (SHPO) and, in some cases, the ACHP, for its determinations of eligibility, effects, and proposed mitigation measures. Section 106 procedures for a specific project can be modified by negotiation of a Memorandum of Agreement or Programmatic Agreement between the federal agency, the SHPO, and, in some cases, the project proponent.

Effects to a cultural resource are potentially adverse if the lead federal agency, with the SHPO's concurrence, determines the resource eligible for the NRHP, making it a Historic Property, and if application of the Criteria of Adverse Effects (36 CFR 800.5[a][2] et seq.) results in the conclusion that the effects will be adverse. The NRHP eligibility criteria, contained in 36 CFR 63, are as follows:

"The quality of significance in American history, architecture, archaeology, and culture is present in districts, sites, buildings, structures, and objects of state and local importance that possess aspects of integrity of location, design, setting, materials, workmanship, feeling, association, and

- A. that are associated with events that have made a significant contribution to the broad patterns of our history; or
- B. that are associated with the lives of persons significant in our past; or
- C. that embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or
- D. that have yielded, or may be likely to yield, information important in prehistory.

In addition, the resource must be at least 50 years old, barring exceptional circumstances (36 CFR 60.4). Resources that are eligible for, or listed on, the NRHP are *historic properties*."

Regulations implementing Section 106 of the NHPA (36 CFR 800.5) require that the federal agency, in consultation with the SHPO, apply the Criteria of Adverse Effect to historic properties within the APE. According to 36 CFR 800.5(a)(1):

"An adverse effect is found when an undertaking may alter, directly or indirectly, any of the characteristics of a historic property that qualify the property for inclusion in the National Register in a manner that would diminish the integrity of the property's location, design, setting, materials, workmanship, feeling or association."

### **1.3.3 California Environmental Quality Act**

The state law that applies to a project's impacts on cultural resources is CEQA. A project is an activity that may cause a direct or indirect physical change in the environment and that is undertaken or funded by a state or local agency, or requires a permit, license, or lease from a state or local agency. A requirement of CEQA is that impacts to Historical Resources be identified and, if the impacts will be significant, then apply mitigation measures to reduce the impacts.

A Historical Resource is a resource that 1) is listed in or has been determined eligible for listing in the California Register of Historical Resources (CRHR) by the State Historical Resources Commission, or has been determined historically significant by the CEQA lead agency because it meets the eligibility criteria for the CRHR; 2) is included in a local register of historical resources, as defined in Public Resources Code (PRC) 5020.1(k); or 3) has been identified as significant in a historical resources survey, as defined in PRC 5024.1(g) (California Code of Regulations [CCR] Title 14, Section 15064.5(a)).

The eligibility criteria for the CRHR are as follows (CCR Title 14, Section 4852(b)):

- (1) It is associated with events that have made a significant contribution to the broad patterns of local or regional history, or the cultural heritage of California or the U.S.;
- (2) It is associated with the lives of persons important to local, California, or national history;
- (3) It embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of a master or possesses high artistic values; or
- (4) It has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California, or the nation.

In addition, the resource must retain integrity, which is evaluated with regard to the retention of location, design, setting, materials, workmanship, feeling, and association (CCR Title 14, Section 4852l). Resources that have been determined eligible for the NRHP are automatically eligible for the CRHR.

Impacts to a Historical Resource, as defined by CEQA (listed in an official historic inventory or survey or eligible for the CRHR), are significant if the resource is demolished or destroyed or if the characteristics that made the resource eligible are materially impaired (CCR Title 14, Section 15064.5(b)). Demolition or alteration of eligible buildings, structures, and features that they would no longer be eligible would result in a significant impact. Whole or partial destruction of eligible archaeological sites would result in a

significant impact. In addition to impacts from construction resulting in destruction or physical alteration of an eligible resource, impacts to the integrity of setting (sometimes termed *visual impacts*) of physical features in the Project Area could also result in significant impacts.

Tribal Cultural Resources (TCRs) are defined in Section 21074 of the California PRC as sites, features, places, cultural landscapes (geographically defined in terms of the size and scope), sacred places, and objects with cultural value to a California Native American tribe that are either included in or determined to be eligible for inclusion in the CRHR, or are included in a local register of historical resources as defined in subdivision (k) of Section 5020.1, or are a resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Section 5024.1. Section 1(b)(4) of Assembly Bill (AB) 52 established that only California Native American tribes, as defined in Section 21073 of the California PRC, are experts in the identification of TCRs and impacts thereto. Because ECORP does not meet the definition of a California Native American tribe, it only addresses information in this report for which it is qualified to identify and evaluate, and that which is needed to inform the cultural resources section of CEQA documents. This report, therefore, does not identify or evaluate TCRs. Should California Native American tribes ascribe additional importance to or interpretation of archaeological resources described herein, or provide information about non-archeological TCRs, that information is documented separately in the AB 52 tribal consultation record between the tribe(s) and lead agency and summarized in the TCRs section of the CEQA document, if applicable.

### **1.3.4 Redlands Historic Resources Designation**

Redlands City Municipal Code Section 2.62.170 establishes the City's criteria for historic significance.

The criteria, any one of which may be used to determine such designation, are as follows:

- A. It has significant character, interest, or value as part of the development, heritage or cultural characteristics of the city of Redlands, state of California, or the United States;
- B. It is the site of a significant historic event;
- C. It is strongly identified with a person or persons who significantly contributed to the culture, history or development of the city;
- D. It is one of the few remaining examples in the city possessing distinguishing characteristics of an architectural type or specimen;
- E. It is a notable work of an architect or master builder whose individual work has significantly influenced the development of the city;
- F. It embodies elements of architectural design, detail, materials, or craftsmanship that represents a significant architectural innovation;
- G. It has a unique location or singular physical characteristics representing an established and familiar visual feature of a neighborhood, community, or the city;

- H. It has unique design or detailing;
- I. It is a particularly good example of a period or style;
- J. It contributes to the historical or scenic heritage or historical or scenic properties of the city (to include, but not be limited to, landscaping, light standards, trees, curbings, and signs);
- K. It is located within a historic and scenic or urban conservation district, being a geographically definable area possessing a concentration of historic or scenic properties which contribute to each other and are unified aesthetically by plan or physical development. (Ord. 1954 Section 8(a), 1986)

## **1.4 Report Organization**

The following report documents the study and its findings and was prepared in conformance with the California Office of Historic Preservation's (OHP) *Archaeological Resource Management Reports*:

*Recommended Contents and Format.* Appendix A includes a confirmation of the records search with the California Historical Resources Information System (CHRIS), a copy of the historic properties located in Redlands on the San Bernardino County Built Environment Resource Directory (BERD), and historical society coordination. Appendix B contains documentation of a search of the Sacred Lands File. Appendix C presents photographs of the Project Area.

Sections 6253, 6254, and 6254.10 of the California Code authorize state agencies to exclude archaeological site information from public disclosure under the Public Records Act. In addition, the California Public Records Act (Government Code Section 6250 et seq.) and California's open meeting laws (The Brown Act, Government Code Section 54950 et seq.) protect the confidentiality of Native American cultural place information. Because the disclosure of information about the location of cultural resources is prohibited by the Archaeological Resources Protection Act of 1979 (16 U.S. Code [USC] 552 470hh) and Section 307103 of the NHPA, it is exempted from disclosure under Exemption 3 of the federal Freedom of Information Act (5 USC 552) Likewise, the Information Centers of the CHRIS maintained by the OHP prohibit public dissemination of records search information. In compliance with these requirements, the results of this cultural resource investigation were prepared as a non-confidential document, which is intended for public distribution in either paper or electronic format. Confidential archaeological site records have been removed from this version.

---

## **2.0 SETTING**

---

### **2.1 Environmental Setting**

The Project Area is located approximately 1.5 miles south of the Santa Ana River on the southern side of the greater Santa Ana Wash, and approximately 3 miles southwest of the San Bernardino Mountains in the San Bernardino Basin. The ground slopes slightly down to the west. Elevations range from 1,275 to 1,309 feet above mean sea level.

## **2.2 Geology and Soils**

Morton and Miller (2006) describe the geology of the Project Area as young axial-Channel deposits, Unit 3, a Holocene alluvial deposit that likely does not extend more than 2 to 5 meters below the surface. It is extensively developed in the area in which the Project Area is located.

According to the Natural Resources Conservation Service (NRCS) Web Soil Survey website (NRCS 2022), two soil types are located within the Project Area. Hanford sandy loam, 0- to 2-percent slopes, is a rarely/never flooded well-drained soil, primarily found in alluvial fans. It is alluvium derived from granite, and the top 12 inches is sandy loam, and a fine sandy loam extends from 12 to 60 inches below surface. Tujunga loamy sand, 0- to 5-percent slopes, is a rarely flooded, somewhat excessively drained soil, primarily found in alluvial fans. It is alluvium derived from granite, and the top 6 inches is loamy sand (A horizon), 6 to 18 inches is loamy sand (C1 horizon), and 18 to 60 inches is loamy sand (C2 horizon).

The potential exists for buried pre-contact archaeological sites in the Project Area due to the presence of Holocene alluvium within the Project Area and the likelihood of pre-contact archaeological sites located along perennial waterways. This potential is low, due to the presence of previous disturbances and historical-period developments.

## **2.3 Vegetation and Wildlife**

The dominant plant community within the Project Area includes California croton (*Croton californica*), vinegarweed (*Trichostema lanceolatum*), filaree (*Erodium* sp.), rattail sixweeks grass (*Festuca myuros*), red brome (*Bromus madritensis rubens*), cheatgrass (*Bromus tectorum*), telegraph weed (*Heterotheca grandiflorum*), dove weed (*Croton setiger*), mustard (*Brassica* sp.), and fiddleneck (*Amsinckia* sp.) (ECORP 2020).

Wildlife species that may occur in the Project Area include Botta's pocket gopher (*Thomomys bottae*), California ground squirrel (*Otospermophilus californicus*), American crow (*Corvus brachyrhynchos*), rock pigeon (*Columba livia*), and mourning dove (*Zenaida macroura*) (ECORP 2020).

---

## **3.0 CULTURAL CONTEXT**

---

### **3.1 Regional Pre-Contact History**

#### **3.1.1 Paleo-Indian Period/Terminal Pleistocene (12,000 to 10,000 BP)**

The first inhabitants of southern California were big game hunters and gatherers exploiting extinct species of Pleistocene megafauna (e.g., mammoth and other Rancholabrean fauna). Local fluted point assemblages comprised of large spear points or knives are stylistically and technologically similar to the Clovis Paleo-Indian cultural tradition dated to this period elsewhere in North America (Moratto 1984). Archaeological evidence for this period in southern California is limited to a few small temporary camps with fluted points found around late Pleistocene lake margins in the Mojave Desert and around Tulare Lake in the southern San Joaquin Valley. Single points are reported from Ocotillo Wells and Cuyamaca Pass in eastern San Diego County and from the Yuha Desert in Imperial County (Rondeau et al. 2007).

### **3.1.2 Early Archaic Period/Early Holocene (10,000 to 8,500 BP)**

Approximately 10,000 years ago, at the beginning of the Holocene, warming temperatures, and the extinction of the megafauna resulted in changing subsistence strategies with an emphasis hunting smaller game and increasing reliance on plant gathering. Previously, Early Holocene sites were represented by only a few sites and isolates from the Lake Mojave and San Dieguito complexes found along former lakebeds and grasslands of the Mojave Desert and in inland San Diego County. More recently, southern California Early Holocene sites have been found along the Santa Barbara Channel (Erlandson 1994), in western Riverside County (Goldberg 2001; Grenda 1997), and along the San Diego County coast (Gallegos 1991; Koerper et al. 1991; Warren 1967).

The San Dieguito Complex was defined based on material found at the Harris site (CA-SDI-149) on the San Dieguito River near Lake Hodges in San Diego County. San Dieguito artifacts include large leaf-shaped points; leaf-shaped knives; large ovoid, domed, and rectangular end and side scrapers; engraving tools; and crescentics (Koerper et al. 1991). The San Dieguito Complex at the Harris site dates to 9,000 to 7,500 BP (Gallegos 1991). However, sites from this time period in coastal San Diego County have yielded artifacts and subsistence remains characteristic of the succeeding Encinitas Tradition, including manos, metates, core-cobble tools, and marine shell (Gallegos 1991; Koerper et al. 1991).

### **3.1.3 Encinitas Tradition or Milling Stone Period/Middle Holocene (8,500 to 1,250 BP)**

The Encinitas Tradition (Warren 1968) and the Milling Stone Period (Wallace 1955) refer to a long period of time during which small mobile bands of people who spoke an early Hokan language foraged for a wide variety of resources including hard seeds, berries, and roots/tubers (yucca in inland areas), rabbits and other small animals, and shellfish and fish in coastal areas. Sites from the Encinitas Tradition consist of residential bases and resource acquisition locations with no evidence for overnight stays. Residential bases have hearths and fire-affected rock indicating overnight stays and food preparation. Residential bases along the coast have large amounts of shell and are often termed shell middens.

The Encinitas Tradition as originally defined (Warren 1968) applied to all of the non-desert areas of southern California. Recently, four patterns within the Encinitas Tradition have been proposed which apply to different regions of southern California (Sutton and Gardner 2010). The Topanga Pattern includes archaeological material from the Los Angeles Basin and Orange County. The Greven Knoll Pattern pertains to southwestern San Bernardino County and western Riverside County (Sutton and Gardner 2010). Each of the patterns is divided into temporal phases. The Topanga Pattern included the Los Angeles Basin and Orange County. The Topanga I phase extends from 8,500 to 5,000 BP and Topanga II runs from 5,000 to 3,500 BP. The Topanga Pattern ended about 3,500 BP with the arrival of Takic speakers, except in the Santa Monica Mountains where the Topanga III phase lasted until about 2,000 BP.

The Encinitas Tradition in inland areas east of the Topanga Pattern (southwestern San Bernardino County and western Riverside County) is the Greven Knoll Pattern (Sutton and Gardner 2010). Greven Knoll I (9,400 to 4,000 BP) has abundant manos and metates. Projectile points are few and are mostly Pinto points. Greven Knoll II (4,000 to 3,000 BP) has abundant manos, metates, and core tools. Projectile points

are mostly Elko points. The Elsinore site on the east shore of Lake Elsinore was occupied during Greven Knoll I and Greven Knoll II. During Greven Knoll I faunal processing (butchering) took place at the lakeshore and floral processing (seed grinding), cooking, and eating took place farther from the shore. The primary foods were rabbit meat and seeds from grasses, sage, and ragweed. A few deer, waterfowl, and reptiles were consumed. The recovered archaeological material suggests that a highly mobile population visited the site at a specific time each year. It is possible that their seasonal round included the ocean coast at other times of the year. These people had an unspecialized technology as exemplified by the numerous crescents, a multi-purpose tool. The few projectile points suggest that most of the small game was trapped using nets and snares (Grenda 1997). During Greven Knoll II, which included a warmer drier climatic episode known as the Altithermal, it is thought that populations in interior southern California concentrated at oases and that Lake Elsinore was one of them. The Elsinore site (CA-RIV-2798) is one of five known Middle Holocene residential sites around Lake Elsinore. Tools were mostly manos, metates, and hammerstones. Scraper planes were absent. Flaked-stone tools consisted mostly of utilized flakes used as scrapers. The Elsinore site during the Middle Holocene was a "recurrent extended encampment" that could have been occupied during much of the year.

The Encinitas Tradition lasted longer in inland areas because Takic speakers did not move east into these areas until circa 1,000 BP. Greven Knoll III (3,000 to 1,000 BP) is present at the Liberty Grove site in Cucamonga (Salls 1983) and at sites in Cajon Pass that were defined as part of the Sayles Complex (Kowta 1969). Greven Knoll III sites have a large proportion of manos and metates and core tools as well as scraper planes. Kowta (1969) suggested the scraper planes may have been used to process yucca and agave. The faunal assemblage consists of large quantities of lagomorphs (rabbits and hares) and lesser quantities of deer, rodents, birds, carnivores, and reptiles.

### **3.1.4 Palomar Tradition (1,250 to 150 BP)**

The material culture of the inland areas where Takic languages, which form a branch or subfamily of the Uto-Aztec language family, were spoken at the time of Spanish contact is part of the Palomar Tradition (Sutton 2011). San Luis Rey I Phase (1,000 BP to 500 BP) and San Luis Rey II Phase (500 BP to 150 BP) pertain to the area occupied by the Luiseño at the time of Spanish contact. The Peninsular I (1,000 BP to 750 BP), Peninsular II (750 BP to 300 BP), and Peninsular III (300 to 150 BP) phases are used in the areas occupied by the Cahuilla and Serrano (Sutton 2011).

San Luis Rey I is characterized by Cottonwood Triangular arrow points, use of bedrock mortars, stone pendants, shell beads, quartz crystals, and bone tools. San Luis Rey II sees the addition of ceramics, including ceramic cremation urns, red pictographs on boulders in village sites, and steatite arrow straighteners. San Luis Rey II represents the archaeological manifestation of the antecedents of the historically known Luiseño (Goldberg 2001). During San Luis Rey I there were a series of small permanent residential bases at water sources, each occupied by a kin group (probably a lineage). During San Luis Rey II people from several related residential bases moved into a large village located at the most reliable water source (Waugh 1986). Each village had a territory that included acorn harvesting camps at higher elevations. Villages have numerous bedrock mortars, large dense midden areas with a full range of flaked and ground stone tools, rock art, and a cemetery.

## 3.2 Ethnography

The Project Area is within the traditional territorial boundaries of the Serrano group of Native Americans. However, territorial boundaries were not static, often expanding and contracting over time. The Project Area, although within the traditional boundaries of Serrano territory, is situated near the edge of that boundary, and near the territorial boundaries of two additional Native American groups who likely occupied this area periodically throughout time. These groups are the Cahuilla and Gabrieliño groups of Native Americans. Ethnographic information pertaining to these three Native American groups with traditional ties to the area are provided below.

### 3.2.1 Cahuilla

Prior to the arrival of European-Americans in the region, Indigenous groups speaking more than 100 different languages and occupying a variety of ecological settings inhabited California. Kroeber (1925, 1936), and others (i.e., Driver 1961; Murdock 1960), recognized the uniqueness of California's Indigenous groups and classified them as belonging to the California culture area. Kroeber (1925) further subdivided California into four subculture areas: Northwestern, Northeastern, Southern, and Central.

Ethnographic accounts of Native Americans indicate that the Project Area is located predominantly within the original territory of the Cahuilla. The Cahuilla spoke a Takic language. The Takic group of languages is part of the Uto-Aztec language family. The Cahuilla occupied a territory ranging from the San Bernardino Mountains in the north to the Chocolate Mountains and Borrego Springs in the south, and from the Colorado Desert in the east to Palomar Mountain in the west. They engaged in trade, marriage, shared rituals, and war with other groups of Native Americans whose territories they overlapped, primarily the Serrano and Gabrielino (Bean 1978, 1972; Kroeber 1925).

Cahuilla subsistence consisted of hunting, gathering, and fishing. Villages were often located near water sources, most commonly in canyons or near drainages on alluvial fans. Major villages were fully occupied during the winter, but during other seasons task groups made periodic forays to collect various plant foods, with larger groupings from several villages organizing for the annual acorn harvest (Bean and Saubel 1972). Bean and Saubel (1972) have recorded the use of several hundred species of plants used for food, building/artifact materials, and medicines. The major plant foods included acorns, pinyon nuts, and various seed-producing legumes. These were complemented by agave, wild fruits and berries, tubers, cactus bulbs, roots and greens, and seeds.

Hunting focused on both small to medium-sized mammals, such as rodents and rabbits, and large mammals, such as pronghorn sheep, mountain sheep, and mule deer. Hunting was done using the throwing stick or the bow and arrow, though nets and traps were also used for small animals (Bean 1972).

Cahuilla buildings consisted of dome-shaped or rectangular houses, constructed of poles covered with brush and above-ground granaries (Bean 1978; Strong 1929). Other material culture included baskets, pottery, and grinding implements; stone tools, arrow shaft straighteners and bows; clothing (loincloths, blankets, rope, sandals, skirts, and diapers); and various ceremonial objects made from mineral, plant, and animal substances (Bean 1972).

As many as 10,000 Cahuilla may have existed at the time of European contact in the 18th century (Bean 1978). Circa 1900, Cahuilla lived in the settlements of La Mesa, Toro, and Martinez on the Augustin and Toro Indian reservations east and southeast of the Project Area (USGS 1904). As of 1974, approximately 900 people claimed Cahuilla ancestry (Bean 1978).

### **3.2.2 Serrano**

The Project Area is located within the territory known to have been occupied by the Serrano group of Native Americans at the time of contact with Europeans, around 1769. The Serrano occupied an area in and around the San Bernardino Mountains and northward into the Mojave Desert. Their territory also extended west along the north slope of the San Gabriel Mountains, east as far as Twentynine Palms, north into the Victorville and Lucerne Valley areas, and south to the Yuipa Valley and San Jacinto Valley (Cultural Systems Research 2005). The Serrano speakers in the Mojave Desert who lived along the Mojave River were known as Vanyume. Serrano is a language within the Takic family of the Uto-Aztec language stock.

The Serrano were mainly hunters and gatherers who occasionally fished. Game hunted included mountain sheep, deer, antelope, rabbits, small rodents, and various birds, particularly quail. Vegetable staples consisted of acorns, pinyon nuts, bulbs and tubers, shoots and roots, juniper berries, mesquite, barrel cacti, and Joshua tree (Bean and Smith 1978).

A variety of materials were used for hunting, gathering, and processing food, as well as for shelter, clothing, and luxury items. Shells, wood, bone, stone, plant materials, and animal skins and feathers were used for making baskets, pottery, blankets, mats, nets, bags and pouches, cordage, awls, bows, arrows, drills, stone pipes, musical instruments, and clothing (Bean and Smith 1978).

Settlement locations were determined by water availability, and most Serranos lived in villages near water sources. Houses and ramadas were round and constructed of poles covered with bark and tule mats (Kroeber 1925). Most Serrano villages also had a ceremonial house used as a religious center. Other structures within the village might include granaries and sweat houses (Bean and Smith 1978).

Serrano social and political units were clans, patrilineal exogamous territorial groups. Each clan was led by a chief who had both political and ceremonial roles. The chief lived in a principal village within the clan's territory. The clans were part of a moiety system such that each clan was either a wildcat or coyote clan and marriages could only occur between members of opposite moieties (Earle 2004). On the north side of the San Bernardino Mountains, clan villages were located along the desert-mountain interface on Deep Creek, on the upper Mojave River, in Summit Valley, and in Cajon Pass. The principal plant food available near these villages was juniper berries. These villages also had access to mountain resources, such as acorns and pinyon nuts.

Partly due to their mountainous and desert inland territory, contact between Serrano and European-Americans was minimal prior to the early 1800s. In 1819, an *asistencia* (mission outpost) was established near present-day Redlands and was used to help relocate many Serrano to Mission San Gabriel. However, small groups of Serrano remained in the area northeast of the San Gorgonio Pass and were able to

preserve some of their native culture. Today, most Serrano live either on the Morongo or San Manuel reservations (Bean and Smith 1978).

### **3.2.3      Gabrieliño**

Ethnographic accounts of Native Americans indicate that the Gabrieliño (also known as Gabrieleño, or Tongva) once occupied the region that encompasses the Project Area. At the time of contact with Europeans, the Gabrieliño were the main occupants of the southern Channel Islands, the Los Angeles Basin, much of Orange County, and extended as far east as the western San Bernardino Valley. The term *Gabrieliño* came from the group's association with Mission San Gabriel Arcángel, established in 1771. The Gabrieliño are believed to have been one of the most populous and wealthy Native American tribes in southern California prior to European contact (Bean and Smith 1978; McCawley 1996; Moratto 1984) and spoke a Takic language. The Takic group of languages is part of the Uto-Aztec language family.

The Gabrieliño occupied villages located along rivers and at the mouths of canyons. Populations ranged from 50 to 200 inhabitants. Residential structures within the villages were domed, circular, and made from thatched tule or other available wood. Gabrieliño society was organized by kinship groups, with each group composed of several related families who together owned hunting and gathering territories. Settlement patterns varied according to the availability of floral and faunal resources (Bean and Smith 1978; McCawley 1996; Miller 1991).

Vegetal staples consisted of acorns, chia, seeds, pinyon nuts, sage, cacti, roots, and bulbs. Animals hunted included deer, antelope, coyote, rabbits, squirrels, rodents, birds, and snakes. The Gabrieliño also fished and collected marine shellfish (Bean and Smith 1978; McCawley 1996; Miller 1991).

By the late 18th century, Gabrieliño population had significantly dwindled due to introduced European diseases and dietary deficiencies. Gabrieliño communities disintegrated as families were taken to the missions (Bean and Smith 1978; McCawley 1996; Miller 1991). However, current descendants of the Gabrieliño are preserving Gabrieliño culture.

## **3.3      Project Area History**

The City of Redlands is situated on a portion of the land known during the Mexican Period as Rancho San Bernardino, which was acquired from the Mexican government by Don Antonio Maria Lugo and his three sons in 1842. Around 1830, prior to the establishment of Rancho San Bernardino, a small *asistencia*, or outpost chapel of the San Gabriel Mission, was constructed in what is now the western outskirts of Redlands, and a small Mexican settlement called San Bernardino existed west of the chapel. The Lugos sold Rancho San Bernardino to Mormon settlers in 1851, who founded the modern City of San Bernardino at its present site (Cleland 1941; Moore 1987; Richards 1966).

The arrival in the San Bernardino area of the Southern Pacific Railroad in the late 1870s and the Atchison, Topeka, and Santa Fe Railway in the mid-1880s increased communications, travel, and shipping between the region and Los Angeles, as well as other parts of the country. A land boom brought about by inexpensive rail fares and aggressive real estate promotions was in progress by the late 1880s. Many new families began to arrive and numerous small towns, including Redlands, were founded. The Redlands

Colony was formed in 1881 by Frank E. Brown, a civil engineer from Connecticut, and Edward G. Judson, a businessman from New York. The original settlement comprised 160 acres around the present-day intersection of Center Street and Cypress Avenue. By 1888, the business center of Redlands was established at its present location surrounding the intersection of Orange and State streets, and the community had grown to encompass several thousand acres with citrus agriculture as its primary industry. The City of Redlands was incorporated that same year (Burgess 1981; Kupfer 1979; F. Moore 1987; W. Moore 1983).

The new City of Redlands was subdivided from the beginning in anticipation of a quickly growing population, but the economic depression of the 1890s resulted in most early 20th century residential development, prior to World War II, taking place in the area south and west of present-day Redlands Boulevard (the road curves as it passes through the community, changing from an east-west to a northwest-southeast alignment).

Citrus farming in San Bernardino Valley soon became centered in the growing community of Redlands. In 1883, Brown, always looking for a better source of water, and Hiram Barton, Dr. Barton's son and a prominent Redlands grower and rancher, set out on a camping trip up the Santa Ana River Canyon to assess Bear Valley as a site for a dam and reservoir for Redlands' increasing irrigation needs. Brown returned to Redlands in a fever of excitement over the possibilities he and Barton had seen. He immediately bought a 20-day option on the valley from its two principal owners, Los Angeles banker J. S. Slauson and the Southern Pacific Railroad. Within those 20 days, Brown managed to raise \$360,000 from investors and incorporate the Bear Valley Land and Water Company to purchase the valley's land, as well as its water rights (Robinson 1989). By November of 1884, a 240-foot-long, 52-foot-high dam had been completed, at a cost of \$75,000. By the following spring, a 1,500-acre, 45-foot-deep reservoir had formed—the beginnings of Big Bear Lake. Irrigation water from the lake reached Redlands for the first time on July 10, 1885 (Hinckley 1956; Richards 1966; Robinson 1989).

By the early 20th century, Redlands had a population of more than 5,000, and had gained the reputation of being the navel orange capital of the world, with over 15,000 acres planted in citrus and more than two dozen packing houses. The greatest disaster in the city's early decades came in 1913, when a three-day freeze destroyed most of the citrus crop and killed thousands of orange trees. Many farmers were left bankrupt, but the community worked together and slowly recovered. New trees were planted, and Redlands regained its leadership as a navel orange center. The citrus industry continued to thrive until after World War II, when land values began to make it more financially worthwhile to sell to developers than to continue to farm (Burgess and Gonzales 2004).

During the post-World War II period, Redlands, like the rest of Southern California, saw significant population growth and development. New population, particularly veterans, flooded into California in pursuit of opportunities in new businesses that sprang from wartime military labor, new residences made feasible by Veterans Administration loans, and GI Bill-funded education. Redlands had a variety of amenities, including a neighboring military post, the University of Redlands, and former orange groves that developed into single-family houses. The city's population rose from 14,300 in 1940 to 18,400 in 1950, 27,000 in 1960, 36,000 in 1970, and 43,000 in 1980. This caused significant changes in the city's character and architectural environment (City of Redlands 2017).

With the economic prosperity and need for new housing immediately after World War II, citrus groves began to give way to housing tracts, and construction of large apartment complexes began in the early 1960s. The local citrus industry never regained the prominence it had enjoyed before the Great Depression. Florida orange producers dominated the canned orange concentrate industry, first for the military and then for civilians. Following the war, these goods grew even more popular due to their low cost and long shelf life, while demand for whole fresh oranges decreased. Redlands producers found themselves packaging fruit for a rapidly diminishing market. Furthermore, the increasing Southern California smog proved problematic for orange groves. During the 1950s and 1960s, dwindling revenues prompted growers to sell more and more of their land for subdivision construction. Packing houses dwindled in number, leaving only a handful functioning (City of Redlands 2017).

This trend of increasing residential and commercial development has continued to the present day and very little of the agricultural setting of early Redlands remains. By 1980, Redlands had changed dramatically from its early days of cottages, mansions, and brick commercial blocks to Ranch, Modern, and Minimal Traditional buildings from the postwar boom. The population had increased to 43,000. The agricultural business was just a minor part of the local economy, with large orange groves reduced to a few acres here and there, and the majority of the remaining packing houses set to be dismantled to make way for even more commercial and industrial development. Redlands citizens have been commonly employed in manufacturing, aerospace research, and high-tech industries. (City of Redlands 2017). As its citrus agriculture gradually fades into history, Redlands continues to prosper while maintaining its downtown core and surrounding neighborhoods reminiscent of a small early 20th century city (City of Redlands 2022).

### ***The Legacy of Irrigation Channels in California***

Irrigation canal construction techniques have varied greatly throughout California's history, from the relatively short, hand-dug, early masonry and tile ditches, to horse-scraped and hand-dug earthen irrigation ditches, to the large concrete-lined, machine-formed irrigation channels of the middle decades of the 20th century. The remaining physical resources on the landscape today bear witness to these shifts in scale, building methods, and engineering understanding. There is significant geographical diversity in the adoption and distribution of new technology, such as where and when concrete replaced wood in large irrigation canal engineering projects. These regional variances can be explained in part by cultural traditions about water management, ownership of water rights, and natural considerations, but economics, politics, and the establishment of various types of irrigation institutions all played important roles.

Older channels were frequently subject to significant alterations over time. A frequent move was to enlarge the system to service larger areas. Unless pumps are utilized, irrigation channels rely on gravity to convey water, and they can only service land below the channel's water level. As irrigated area increased, water corporations generally combined smaller ditch systems, relocated the source of diversion upstream, and constructed a high-line channel to serve new land. Pioneer channels were regularly absorbed into bigger networks, most commonly by irrigation districts, in order to draw in additional potentially irrigable area. Segments of previous irrigation systems may stay substantially intact within the wider framework of

a new irrigation system, or the alterations may be such that the old distinct irrigation system becomes, in effect, a standard component of a new 1920s irrigation district channel (California Department of Transportation [Caltrans] 2000).

### ***Open Channels***

Irrigation channels, like LPA-003, are perhaps the most frequent channel type in California. These conduits supply water for pastures, row crops, orchards, and vineyards and come in a variety of sizes, shapes, and materials. Like other channels, they are usually part of a larger system. Water is routed from a storage dam or diversion into a main channel, then into laterals, and finally into individual farm distribution ditches via outlet gates or other control structures. In regions like Southern California, much of the distribution system is underground, with just the main channels, or trunk lines, remaining above ground. In many regions, the main channels remain unlined, although in others, intensive channel lining schemes have been implemented this century to reduce seepage losses.

The cross section or profile of open channels varies depending on the conduit's material and construction style. When built in rock, the channel was more rectangular but the channel shape changed to trapezoidal, depending on the material used. Early scraper-built channels in the Central Valley's alluvial soils featured rounded bottoms and lengthy side slopes, with rounded berms mounded up on each side of the cut. In comparable places, irrigation channels cut with contemporary technology and blades are V-shaped, with steep side slopes and flat wide berms.

In terms of width-to-depth ratio, the most hydraulically efficient channel would have a hydraulic radius that is half the depth of the water. Thus, the channel's breadth would be double its depth. However, in sidehill areas, it is more cost-effective to build a smaller, deeper channel, and channel builders frequently chose an inexpensive design over the most hydraulically efficient one. According to a 1934 research, the hydraulic radius of hydroelectric channels in California ranged from 0.5 to 0.8 times the water depth, with an average of 0.6. The figures for hydraulic mining and irrigation channels appear to be comparable. The reason for any significant deviation from this ratio should be examined. In a cold environment, narrow, deep channels are less likely to freeze over than wide, shallow ones of the same capacity, hence a different ratio may be utilized to decrease ice formation.

In every dry or semi-arid region, water system operators and management strive to reduce losses due to evaporation and seepage. In California, hundreds of miles of originally earthen ditches have been coated with a less permeable surface or buried in pipe. Lined channels may also transport more water by moving it quicker, and they can protect the banks and bottom from scouring caused by high-velocity water.

Channels were bordered in the 19th century with irregularly coursed stone pavement or cobblestone, which was normally dry placed and 12 to 18 inches thick. Concrete and shotcrete (gunite) linings averaging 2 to 4.5 inches thick were used throughout the 20th century. Concrete channels have a higher carrying capacity than rough stone or clay channels, holding almost twice as much water in the same space. Lining channels with concrete can reduce maintenance costs, reduce seepage loss, and boost carrying capacity for irrigation companies and agencies with appropriate money (Caltrans 2000).

### **3.4 Personnel Qualifications**

Registered Professional Archaeologist (RPA) Sonia Sifuentes, who meets the Secretary of the Interior's Professional Qualifications Standards for prehistoric and historical archaeology, supervised this cultural resource investigation. Associate Archaeologist Evelyn Hildebrand, RPA and Steve Wintergerst conducted the fieldwork. Staff Archaeologist Michael M. DeGiovine, RPA, Associate Archaeologist Julian E. Acuña, RPA, and Associate Archaeologists Nicholas Bizzell, Evelyn Hildebrand, RPA and Steve Wintergerst prepared the technical report. Architectural historian Andrew Bursan, MCRP provided the built environment evaluation. Lisa Westwood, RPA provided technical report review and quality assurance.

Sonia Sifuentes is a Senior Archaeologist at ECORP and has more than 14 years of experience in cultural resources management, primarily in southern California. Ms. Sifuentes holds an M.S. in Archaeology and meets the Secretary of the Interior's Professional Qualifications Standards for prehistoric and historic archaeology. She has participated in and supervised numerous surveys, test programs, data recovery excavations, and construction monitoring compliance for both prehistoric and historical sites; and has cataloged, identified, and curated thousands of artifacts. She has conducted evaluations of cultural resources for eligibility for the NRHP and CRHR. Ms. Sifuentes is experienced in the organization and execution of field projects in compliance with Section 106 of the NHPA and CEQA. She has contributed to and authored numerous cultural resources technical reports, research designs, and cultural resources management plans.

Evelyn Hildebrand, RPA is an Associate Archaeologist with over five years of experience working in cultural resource management across California. She holds an M.A. in Applied Archaeology and a B.A. in Anthropology with a focused curriculum in archaeology. She meets the Secretary of the Interior's Professional Qualifications Standards for prehistoric and historic archaeology. She has participated in various aspects of archaeological fieldwork including survey, test excavation, data recovery, artifact analysis, construction monitoring, both as an archaeological monitor and field lead, and the recording and recovery of pre-contact and historic-period archaeological sites.

Julian E. Acuña, RPA is an Associate Archaeologist with over six years of experience in cultural resources management. Mr. Acuña holds an M.A. in Applied Archaeology and a B.A. Cum Laude in Anthropology from California State University-San Bernardino. He meets the Secretary of the Interior's Professional Qualifications Standards for prehistoric and historic archaeology. He has participated in various aspects of archaeological fieldwork including survey, test excavations, construction monitoring, the recording of both pre-contact and historic-period archaeological sites, and laboratory work for the analysis and cataloging of artifacts from multi-component sites.

Michael M. DeGiovine, RPA is a Staff Archaeologist with over 15 years of experience in cultural resources management. He meets the Secretary of the Interior's Professional Qualifications Standards for prehistoric and historic archaeology. Mr. DeGiovine holds an M.A. in Anthropology from California State University, Fullerton in addition to a B.A in Anthropology from the University of California, San Diego. He has prepared or contributed to environmental documents, such as Environmental Impact Reports/Environmental Impact Statements or Cultural Resource studies that deal with CEQA and NHPA Sections 106 and 110. Mr. DeGiovine has coordinated and cooperated with primary contractors, clients,

and other environmental stakeholders to ensure that projects meet environmental compliance and are completed expeditiously.

Nicholas Bizzell is an Associate Archaeologist with ECORP and has over 11 years of experience in cultural resources management. He holds a B.A. in Anthropology from Sonoma State University in Rohnert Park, California. Mr. Bizzell has participated in numerous archaeological projects throughout California, experience that includes working with clients in both public and private sectors. Mr. Bizzell has substantial archaeological experience with cultural resources monitoring, inventory surveys, excavation and subsurface testing, and laboratory analysis for projects in northern and southern California. Additionally, Mr. Bizzell is cross trained as a paleontological monitor for projects requiring both archaeological and paleontological monitoring.

Steven Wintergerst is an Associate Archaeologist with 14 years of experience in cultural resources management, and has been cross-trained in Paleontology for 12 years. Mr. Wintergerst holds a B.A. in Anthropology. He has participated in all aspects of the archaeological field and laboratory process. Although he has worked throughout western Arizona and California, the majority of his experience is in Riverside, San Bernardino, San Diego, Kern, Inyo, and Los Angeles counties of southern California. His experience has involved working as an archaeological crew chief, archaeological technician, archaeological monitor, paleontological monitor, and paleontological preparator. He is experienced in the organization and execution of field projects in compliance with CEQA. He has conducted evaluations of cultural resources for eligibility for the NRHP and CRHR.

Andrew Bursan is an Architectural Historian with 16 years of experience in historic preservation and land planning. He has worked on a variety of projects with organizations like Caltrans, LA County Metro, and several city governments, including Pasadena, Santa Monica, San Francisco, and Los Angeles. Andrew's expertise covers project management, architectural surveys, historical assessments, and extensive historical research. He has contributed to historic context statements, technical reports, and impact analyses for cultural resources.

Lisa Westwood, RPA has 27 years of experience and meets the Secretary of the Interior's Professional Qualifications Standards for prehistoric and historical archaeology. She holds a B.A. in Anthropology and an M.A. in Anthropology (Archaeology). She is the Director of Cultural Resources for ECORP.

### **3.5 Records Search Methods**

ECORP staff conducted and completed a records search for the Project Area at the South Central Coastal Information Center (SCCIC) of the CHRIS at California State University-Fullerton, on September 7, 2022 (Appendix A). The purpose of the records search was to determine the extent of previous surveys within a 1-mile (1,600-meter) radius of the Proposed Project location, and whether previously documented pre-contact or historic archaeological sites, architectural resources, or traditional cultural properties exist within this area.

In addition to the official records and maps for archaeological sites and surveys in San Bernardino County, the following historic references were also reviewed: BERD (OHP 2022a); the National Register Information System (National Park Service [NPS] 2022); OHP California Historical Landmarks (CHL; OHP 2022b); CHL

(OHP 1996 and updates); California Points of Historical Interest (OHP 1992 and updates); Caltrans Local Bridge Survey (Caltrans 2020); Caltrans State Bridge Survey (Caltrans 2019), and *Historic Spots in California* (Kyle 2002).

Other references examined include a RealQuest Property Search and historic General Land Office (GLO) land patent records (Bureau of Land Management [BLM] 2022). Historic maps reviewed include:

- the 1899 USGS Redlands, California topographic quadrangle map (1:62,500 scale);
- the 1954 USGS Redlands, California topographic quadrangle map (1:24,000 scale);
- the 1967 USGS Redlands, California topographic quadrangle map (1:24,000 scale); and
- the 1975 USGS Redlands, California topographic quadrangle map (1:24,000 scale).

ECORP reviewed historic aerial photos for any indications of property usage and built environments taken in the years 1938, 1959, 1966, 1968, 1980, 1984, 1985, and 1994.

### **3.6 Sacred Lands File Coordination Methods**

In addition to the records search, ECORP contacted the California Native American Heritage Commission (NAHC) on August 9, 2022 to request a search of the Sacred Lands File for the Project Area (Appendix B). This search will determine whether or not the California Native American tribes within the Project Area have recorded Sacred Lands, because the Sacred Lands File is populated by members of the Native American community with knowledge about the locations of tribal resources. In requesting a search of the Sacred Lands File, ECORP solicited information from the Native American community regarding TCRs, but the responsibility to formally consult with the Native American community lies exclusively with the federal and local agencies under applicable state and federal laws. The lead agencies have not delegated authority to ECORP to conduct tribal consultation.

### **3.7 Other Interested Party Consultation Methods**

ECORP mailed letters to the Redlands Area Historical Society on August 24, 2022 to solicit comments or obtain historical information that the repository might have regarding events, people, or resources of historical significance in the area (Appendix A).

### **3.8 Field Methods**

ECORP subjected the APE to an intensive pedestrian survey on September 21 to 22, 2022 and October 5, 2022 under the guidance of the *Secretary of the Interior's Standards for the Identification of Historic Properties* (NPS 1983) using 15-meter transects (Figure 2). ECORP expended two person-days in the field. At the time, the ground surface was examined for indications of surface or subsurface cultural resources. The general morphological characteristics of the ground surface were inspected for indications of subsurface deposits that may be manifested on the surface, such as circular depressions or ditches. Whenever possible, ECORP examined the locations of subsurface exposures caused by such factors as rodent activity, water or soil erosion, or vegetation disturbances for artifacts or for indications of buried

deposits. No subsurface investigations or artifact collections were undertaken during the pedestrian survey.

Standard professional practice requires that all cultural resources encountered during the survey be recorded using Department of Parks and Recreation (DPR) 523-series forms approved by the California OHP. The resources are usually photographed, mapped using a handheld Global Positioning System receiver, and sketched as necessary to document their presence using appropriate DPR forms.

## **4.0 RESULTS**

### **4.1 Records Search**

The records search consisted of a review of previous research and literature, records on file with the SCCIC for previously recorded resources, and historical aerial photographs and maps of the vicinity.

#### **4.1.1 Previous Research**

Forty previous cultural resource investigations have been conducted in or within 1 mile of the property, covering approximately 5 percent of the total area surrounding the property within the records search radius. One of the 40 studies was conducted within the Project Area (Table 1) and the other 39 were within the 1-mile radius. These studies revealed the presence of a single pre-contact habitation site, and historical sites including rock walls and sites associated with historic mining activities. The previous studies were conducted between 1985 and 2014.

SB-02792	Mason, Roger D. and McKenna, Jeanette A.	Cultural Resources Survey for the Cities Pavilion Project, Redlands, California	1993	Yes

The results of the records search indicate that less than 5 percent of the property has been previously surveyed for cultural resources and, therefore, a pedestrian survey was warranted.

The records search also determined that 129 previously recorded historic-era cultural resources are located within 1 mile of the Project Area. These resources are a mixture of historic-period houses and agricultural features such as water conveyance systems typical of the area's orchard agricultural period.

#### **4.1.2 Records**

The OHP's BERD for San Bernardino County included multiple properties within 1 mile of the Project Area (OHP 2022a), as Redlands is a city that has been established since the late 1800s. There are no properties included within the Project Area. A copy of the historic properties located in Redlands on the San Bernardino County BERD is included in Appendix A.

The National Register Information System (NPS 2022) failed to reveal any eligible or listed properties within the Project Area. The nearest National Register property is located 1.3 miles southeast of the Project Area; it is the Redlands Santa Fe Depot District.

ECORP reviewed resources listed as CHL (OHP 1996) by the OHP (2022b) on October 5, 2022. CHL #42, the Asistencia, is 1.75 miles southwest of the Project Area. CHL #43; The Zanja is 0.95 mile south of the Project Area. CHL #95, Guachama Rancheria, is 2.5 miles southwest of the Project Area. CHL #994; the A. K. Smiley Public Library is 1.45 miles southeast of the Project Area. CHL #1019 the Kimberly Crest Mansion is 2.75 miles southeast of the Project Area. All of these are located within the City of Redlands. CHL #1019, the Kimberly Crest Mansion, is mentioned in *Historic Spots in California* (Kyle 2002). Kyle describes the

Kimberly Crest House as an example of architecture built during Redland's Resort Era, a time when this area was a highly desirable area for winter homes.

Historic GLO land patent records from the BLM's patent information database (BLM 2022) revealed that the southern half of the northeastern quarter of Section 21 was warranted to John F. Miller and James Forsee on July 20, 1878, under the Scrip Warrant Act of 1855 (10 Stat. 701). This warrant also included the southern half of the northwestern quarter of Section 21, totaling 160 acres, and was granted due to Forsee's service in Captain Cook's Company Virginia Militia in the War of 1812.

On the outset of the Project, the Project Area was divided into two separate parcels: APNs 0167-171-140-000 and 0167-171-070-00. After a lot alignment adjustment, these two parcels were combined into APN 0167-171-150-000. Prior to this lot alignment adjustment, ECORP conducted a RealQuest online property search for the original two separate parcels. A RealQuest online property search for the two APN are as follows: 0167-171-140-000 described the parcel as 7.52 acres of vacant land. APN 0167-171-070-00 described the parcel as 6.62 acres of vacant land.

The Caltrans Bridge State Inventory (Caltrans 2019) lists four historic-period bridges within 1 mile of the Project Area (Table 3), but none are within the Project Area. The Caltrans Bridges Local Inventory (Caltrans 2020) does not list any bridge within 1 mile of the Project Area.

**Table 3. Historic-Period Bridges within 1 Mile of the Project Area**

Bridge Number	Year Built	Name	Eligibility
54 0583	1962	Texas Street UC	5. Not eligible for the NRHP Criterion C
54 0591	1962	Colton & New York Avenue OC	5. Not eligible for the NRHP Criterion C
54 0592	1962	Tennessee Street OC	5. Not eligible for the NRHP Criterion C
54 0593	1962	Alabama Street OC	5. Not eligible for the NRHP Criterion C

Note: NRHP = National Register of Historic Places; OC = Overcrossing; UC = Undercrossing

The *Handbook of North American Indians* (Bean 1978) lists the nearest Native American village as *Aykat*. This village is located at the western opening of the San Gorgonio Pass just west of the town of Cabazon, approximately 21 miles southeast of the Project Area.

#### **4.1.3 Map Review and Aerial Photographs**

The review of historical aerial photographs and maps of the Project Area provide information on the past land uses of the property and potential for buried archaeological sites. This information shows the property was initially used for agriculture. Following is a summary of the review of historical maps and photographs.

- The 1899 USGS Redlands, California topographic quadrangle map (1:62,500 scale) shows the Project Area as vacant with one structure present southeast of the APE.

- The 1954 USGS Redlands, California topographic quadrangle map (1:24,000 scale) shows the Project Area as agricultural fields with the same structure visible southeast of the APE. Lugonia Street is now visible in the vicinity.
- The 1967 USGS Redlands, California topographic quadrangle map (1:24,000 scale) shows the Project Area unchanged. The nearby structure is no longer visible.
- The 1975 USGS Redlands, California topographic quadrangle map (1:24,000 scale) shows the Project Area as agricultural fields; some portions have been left fallow and others have been removed.
- A review of aerial photographs from 1938 show the Project Area as agricultural fields. What is now Lugonia Avenue is visible in the vicinity.
- Aerial photographs from 1959, 1966, and 1968 aerial photographs, the Project Area remains relatively unchanged with portions of the agricultural field left fallow.
- Aerial photographs from 1980 aerial photographs portions of the agricultural fields on the west boundary have been removed.
- Aerial photographs from 1984 and 1985 show the Project Area in the same state. Interstate 210 freeway is now visible in the vicinity.
- Aerial photographs from 1994 show Tennessee Street bounding the western portion of the Project Area. Conditions remain unchanged to present day.

In sum, the property has been historically used for agriculture and then left fallow.

## **4.2        Sacred Lands File Results**

The results of the NAHC search of the Sacred Lands File are positive. The NAHC recommended that the lead agency to reach out to the Agua Caliente Band of Cahuilla Indians, the Augustine Band of Cahuilla Mission Indians, the Cabazon Band of Mission Indians, the Cahuilla Band of Indians, the Chemehuevi Indian Tribe, the Colorado River Indian Tribes, the Fort Mojave Indian Tribe, the Gabrieleno Band of Mission Indians-Kizh Nation, the Gabrieleno\Tongva San Gabriel Band of Mission Indians, and the Gabrielino/Tongva Nation. A record of all correspondence to date is provided in Appendix B so that the lead agency can follow up with these tribes as part of formal consultation.

## **4.3        Other Interested Party Consultation Results**

ECORP has not received any responses to the letters sent to the Redlands Area Historical Society as of the date of the preparation of this document.

## **4.4        Field Survey Results**

ECORP originally surveyed the Project Area for cultural resources on September 21 to 22, 2022. Surface visibility ranged from approximately less than 10 to 90 percent. Disturbances observed include discing, vegetation, homeless encampment, and modern refuse. The main vegetation types are low grasses and

plants. Concrete foundations were observed within the APE but based on discernable features were determined to be modern.

Following a reconfigured Project APE that resulted in data gaps, an intensive pedestrian survey was conducted on October 5, 2022. Surface visibility was 90 percent or better. The original survey area was approximately 65 acres and was reconfigured to approximately 14 acres. Disturbances included discing, vegetation, and modern refuse. The main vegetation types observed during the visit include low grasses (i.e., Bermuda), mustard, goat head, and Russian thistle. Two historic-era concrete and brick water channels, two concrete-covered brick vaults, and two concrete tube stand pipe features were discovered. These appear connected and were designated as site LPA-003, features 1 through 6.

**Figure 2. Project Area Overview from Northeastern Corner  
(view southwest; October 5, 2022).**

**Figure 3. Project Area Overview from Northwestern Corner  
(view southeast; October 5, 2022).**

#### **4.4.1 Cultural Resources**

As a result of the previous investigation, no previously recorded resources were located within the APE. The 2022 survey by ECORP identified the one new cultural resource within the Project Area: LPA-003, a concrete and brick water conveyance system. Site description follows, and confidential DPR site record is provided in Appendix D.

##### **4.4.1.1 LPA-003**

Resource LPA-003 is a water conveyance system consisting of six features: **REDACTED**.

As components of a larger irrigation system, LPA-003 helped to sustain orange groves located immediately northwest of Redlands. For much of the 20th century, the area surrounding Redlands formed "the heart of the largest navel orange producing region in the world" (City of Redlands 2022). Groundwater pumping provided much of the area's irrigation water. Brick channels and concrete pipes and standpipes helped to distribute the water across the landscape of orange groves. Working examples of this infrastructure remain evident in historic groves preserved at the City of Redland's Prospect Park (Graham 2011).

LPA-003 was likely built in 1945, as indicated by **REDACTED**.

#### **4.4.2      Evaluation of Cultural Resources**

LPA-003 does not meet any of the criteria for listing in the NRHP, CRHR, or as a City of Redlands Historic Resource individually or as part of an existing historic district, as demonstrated below.

##### ***NRHP/CRHR Criterion A/1***

To be eligible under Criterion A/1, a water conveyance system must be linked to specific major events or significant patterns of occurrences. LPA-003 was constructed circa 1945 as an irrigation system that sustained orange groves immediately northeast of Redlands and is associated with the trend of 1940s-era citrus agricultural development in Redlands. Despite the association, LPA-003 is a commonplace example of its type, and many similar brick channels and concrete standpipes exist both in Redlands and San Bernardino County. Research did not find that the construction of the resource represented a significant innovation in the development of water conveyance. Therefore, archival research indicates that LPA-003 is not associated with events that have made a significant contribution to the broad patterns of our history at the local level; therefore, it is not eligible for the NRHP/CRHR under Criteria A/1.

##### ***NRHP/CRHR Criterion B/2***

For eligibility under Criterion B/2, a resource must be associated with an important person's productive life and must be the property that is most closely associated with that person. Research did not uncover any individuals directly associated with the construction or maintenance of LPA-003. Local farm crews most likely built and maintained LPA-003 over the course of its history. The resource, however, is not associated with the lives of persons significant in our past, and it is not eligible for the NRHP/CRHR under Criteria B/2.

##### ***NRHP/CRHR Criterion C/3***

For water conveyance systems to be found eligible under Criterion C/3 they should exhibit engineering or design value or represent the earliest, best preserved, largest, or sole surviving example of type. Resource LPA-003 consists of **REDACTED**. These irrigation features are ubiquitous and utilitarian. Local examples include extant brick channels preserved in historic orange groves at the City of Redland's Prospect Park. The resource does not embody the distinctive characteristics of a type, period, or method of construction, or represent the work of a master, or possesses high artistic values, or represent a significant and distinguishable entity whose components may lack individual distinction. Therefore, it is not eligible for the NRHP/CRHR under Criteria C/3.

##### ***NRHP/CRHR Criterion D/4***

The information potential of LPA-003 is expressed in its built form and in the historical record. It has not yielded, nor is it likely to yield, information important in history or prehistory. Foundations for irrigation systems are not associated with residential features that could provide archaeological deposits. Therefore, this site was not subjected to testing and based on other lines of evidence in the archival and material record, it is not eligible for the NRHP/CRHR under Criteria D/4.

## ***Integrity***

Resource LPA-003 possesses some integrity of location and association. It remains in its original location immediately northwest of downtown Redlands. The features remain constructed of **REDACTED** and remain associated with historic orange groves in the vicinity of Redlands. LPA-003 does not, however, possess integrity of setting, workmanship, and feeling. A suburban consumer-oriented landscape of housing tracts, freeways, and shopping centers has supplanted the rural setting of expansive orange groves. Damage to the resource's construction diminishes its craftsmanship and its ability to convey the overall aesthetic of a 20th-century irrigation system in a southern California orange grove, compromising its overall integrity.

Regardless of integrity, due to lack of historical significance, LPA-003 does not meet NRHP or CRHR eligibility criteria as an individual resource or as part of any known or suspected historic district; it is also not listed on any Certified Local Government historic property register.

### ***City of Redlands Historic Resource Designation (Redlands City Municipal Code § 2.62.170)***

**A. *It has significant character, interest, or value as part of the development, heritage or cultural characteristics of the city of Redlands, state of California, or the United States;***

Resource LPA-003 consists of **REDACTED**. These irrigation features are ubiquitous and utilitarian. Local examples include extant brick channels preserved in historic orange groves at the City of Redland's Prospect Park. Therefore, LPA-003 does not have significant character, interest, or value as part of the development, heritage or cultural characteristics of the City of Redlands, State of California, or the United States

**B. *It is the site of a significant historic event;***

LPA-003 was constructed circa 1945 as an irrigation system that sustained orange groves immediately northeast of Redlands and is associated with the trend of 1940s-era citrus agricultural development in Redlands. Archival research indicates that LPA-003 is not associated with events that have made a significant contribution to the broad patterns of our history at the local level and is not the site of a significant historic event.

**C. *It is strongly identified with a person or persons who significantly contributed to the culture, history or development of the city;***

Research did not uncover any individuals directly associated with the construction or maintenance of LPA-003. Local farm crews most likely built and maintained LPA-003 over the course of its history. Therefore, LPA-003 is not strongly identified with a person or persons who significantly contributed to the culture, history or development of the city.

**D. *It is one of the few remaining examples in the city possessing distinguishing characteristics of an architectural type or specimen;***

Irrigation features such as LPA-003 are utilitarian and **REDACTED** exist both in Redlands and San Bernardino County. Local examples include extant brick channels preserved in historic orange groves at the City of Redland's Prospect Park. Therefore, it is not one of the few remaining examples in the city possessing distinguishing characteristics of an architectural type or specimen.

**E. *It is a notable work of an architect or master builder whose individual work has significantly influenced the development of the city;***

LPA-003 exhibits a simplistic and utilitarian design. Based on design features and archival research, it is highly unlikely that it is a notable work of an architect or master builder whose individual work has significantly influenced the development of the city.

**F. *It embodies elements of architectural design, detail, materials, or craftsmanship that represents a significant architectural innovation;***

Many conveyance systems like LPA-003 exist both in Redlands and San Bernardino County and research did not find that the construction of the resource represented a significant innovation in the development of water conveyance. Therefore, it does not embody elements of architectural design, detail, materials, or craftsmanship that represent a significant architectural innovation.

**G. *It has a unique location or singular physical characteristics representing an established and familiar visual feature of a neighborhood, community, or the city;***

LPA-003 consists of **REDACTED**. It was formerly used for citrus groves but archival resources did not suggest it has a unique location or singular physical characteristics representing an established and familiar visual feature of a neighborhood, community, or the city.

**H. *It has unique design or detailing;***

LPA-003 exhibits a simplistic and utilitarian design with no embellishment. Therefore, it does not have a unique design or detailing.

**I. *It is a particularly good example of a period or style;***

LPA-003 was constructed circa 1945 but research did not find that the construction of the subject water conveyance system represented the work of a master. Therefore, it is not a particularly good example of a period or style.

**J. *It contributes to the historical or scenic heritage or historical or scenic properties of the city (to include, but not be limited to, landscaping, light standards, trees, curbings, and signs);***

LPA-003 is a utilitarian water conveyance feature and is not located on a prominent street in Redlands. Due to its commonplace location, the subject property is not a primary example of scenic heritage.

- K. It is located within a historic and scenic or urban conservation district, being a geographically definable area possessing a concentration of historic or scenic properties which contribute to each other and are unified aesthetically by plan or physical development. (Ord. 1954 § 8(a), 1986)**

LPA-003 is in a neighborhood with a mix of property uses and architectural themes and does not have a definable area possessing a concentration of historic or scenic properties which contribute to each other and are unified aesthetically by plan or physical development.

## **5.0 MANAGEMENT CONSIDERATIONS**

### **5.1 Conclusions**

As a result of the field survey, ECORP identified one new historic-period resource, LPA-003. This resource has been evaluated using NRHP, CRHR, and City of Redlands Historic Resource list eligibility criteria and found not eligible for inclusion in the NRHP, CRHR, or as a City of Redlands Historic Resource. LPA-003 is not considered a historical resource under CEQA or a historic property under Section 106.

### **5.2 Likelihood for Subsurface Cultural Resources**

The Project Area contains Holocene alluvial deposits contemporaneous with human occupation of the region. Although ECORP archaeologists did not identify pre-contact resources during the field survey, due to the presence of Holocene alluvial deposits within the Project Area and the known ephemeral waterways in the vicinity of the Project Area, a moderate potential exists for buried pre-contact archaeological sites within the Project Area.

### **5.3 Post-Review Discoveries**

The potential always remains for ground-disturbing activities to expose previously unrecorded cultural resources. Both CEQA and Section 106 of the NHPA require the lead agency to address any unanticipated cultural resource discoveries during Project construction. Therefore, ECORP recommends the lead agency adopt and implement the following mitigation measures to reduce potential adverse impacts to less than significant:

- If subsurface deposits believed to be cultural or human in origin are discovered during construction, all work must halt within a 100-foot radius of the discovery. A qualified professional archaeologist, meeting the Secretary of the Interior's Professional Qualification Standards for prehistoric and historic archaeology, shall be retained to evaluate the significance of the find, and shall have the authority to modify the no-work radius as appropriate, using professional judgment. The following notifications shall apply, depending on the nature of the find:

If the professional archaeologist determines that the find does not represent a cultural resource, work may resume immediately and no agency notifications are required.

If the professional archaeologist determines that the find does represent a cultural resource from any time period or cultural affiliation, the archaeologist shall immediately notify the lead agencies. The agencies shall consult on a finding of eligibility and implement appropriate treatment measures, if the find is determined to be a Historical Resource under CEQA, as defined in Section 15064.5(a) of the CEQA Guidelines or a historic property under Section 106 NHPA, if applicable. Work may not resume within the no-work radius until the lead agencies, through consultation as appropriate, determine that the site either: 1) is not a Historical Resource under CEQA or a Historic Property under Section 106; or 2) that the treatment measures have been completed to their satisfaction.

If the find includes human remains, or remains that are potentially human, they shall ensure reasonable protection measures are taken to protect the discovery from disturbance (AB 2641). The archaeologist shall notify the San Bernardino County Coroner (per Section 7050.5 of the Health and Safety Code). The provisions of Section 7050.5 of the California Health and Safety Code, Section 5097.98 of the California PRC, and AB 2641 will be implemented. If the coroner determines the remains are Native American and not the result of a crime scene, the coroner will notify the NAHC, which then will designate a Native American Most Likely Descendant (MLD) for the Project (Section 5097.98 of the PRC). The designated MLD will have 48 hours from the time access to the property is granted to make recommendations concerning treatment of the remains. If the landowner does not agree with the recommendations of the MLD, the NAHC can mediate (Section 5097.94 of the PRC). If no agreement is reached, the landowner must rebury the remains where they will not be further disturbed (Section 5097.98 of the PRC). This will also include either recording the site with the NAHC or the appropriate Information Center; using an open space or conservation zoning designation or easement; or recording a reinternment document with the county in which the property is located (AB 2641). Work may not resume within the no-work radius until the lead agencies, through consultation as appropriate, determine that the treatment measures have been completed to their satisfaction.

Notes: \_\_\_\_\_

---

## CHRIS Data Request Form

Mark the request form as needed. Attach a PDF of your project area (with the radius if applicable) mapped on a 7.5' USGS topographic quadrangle to scale 1:24000 ratio 1:1 neither enlarged nor reduced and include a shapefile of your project area, if available. Shapefiles are the current CHRIS standard for submitting digital spatial data for your project area or radius. **Check with the appropriate IC for current availability of digital data products.**

- Documents will be provided in PDF format. Paper copies will only be provided if PDFs are not available at the time of the request or under specially arranged circumstances.
- Location information will be provided as a digital map product (Custom Maps or GIS data) unless the area has not yet been digitized. In such circumstances, the IC may provide hand drawn maps.
- In addition to the \$150/hr. staff time fee, client will be charged the Custom Map fee when GIS is required to complete the request [e.g., a map printout or map image/PDF is requested and no GIS Data is requested, or an electronic product is requested (derived from GIS data) but no mapping is requested].

For product fees, see the CHRIS IC Fee Structure on the [OHP website](#).

The following sources of information may be available through the Information Center. However, several of these sources are now available on the [OHP website](#) and can be accessed directly. The Office of Historic Preservation makes no guarantees about the availability, completeness, or accuracy of the information provided through these sources. Indicate below if the Information Center should review and provide documentation (if available) of any of the following sources as part of this request.

**Caltrans Bridge Survey**yes  / no **Ethnographic Information**yes  / no **Historical Literature**yes  / no **Historical Maps**yes  / no **Local Inventories**yes  / no **GLO and/or Rancho Plat Maps**yes  / no **Shipwreck Inventory**yes  / no **Soil Survey Maps**yes  / no 

<sup>1</sup> In order to receive archaeological information, requestor must meet qualifications as specified in Section III of the current version of the California Historical Resources Information System Information Center Rules of Operation Manual and be identified as an Authorized User or Conditional User under an active CHRIS Access and Use Agreement.

<sup>2</sup> "Other" Reports GIS layer consists of report study areas for which the report content is almost entirely non-fieldwork related (e.g., local/regional history, or overview) and/or for which the presentation of the study area boundary may or may not add value to a record search.

<sup>3</sup> Provided as Excel spreadsheets with no cost for the rows; the only cost for this component is IC staff time. Includes, but not limited to, information regarding National Register of Historic Places, California Register of Historical Resources, California State Historical Landmarks, California State Points of Historical Interest, and historic building surveys. Previously known as the HRI and then as the HPD, it is now known as the Built Environment Resources Directory (BERD). The Office of Historic Preservation compiles this documentation and it is the source of the official status codes for evaluated resources.

<sup>4</sup> Associated documentation will vary by resource. Contact the IC for further details.

<sup>5</sup> Provided as Excel spreadsheets with no cost for the rows; the only cost for this component is IC staff time. Previously known as the Archaeological Determinations of Eligibility, now it is known as the Archaeological Resources Directory (ARD). The Office of Historic Preservation compiles this documentation and it is the source of the official status codes for evaluated resources.

***RE: Cultural Resources Identification Effort for the Diversified Pacific- LPA Property Cultural Project, San Bernardino County, California***

Dear Redlands Area Historical Society:

ECORP Consulting, Inc. has been retained to assist in the planning of the development on the project indicated above. The proposed project consists of approximately 65 acres located at Lugonia Avenue and Tennessee Street in the City of Redlands. The project would develop a mixed residential and commercial complex on a total of four parcels, also known as Assessor's Parcel Numbers (APNs) 0167-171-007, 0167-171-014, 0167-171-11-0-000, and 0167-171-12-0-000. The City of Redlands will serve as the lead agency for environmental compliance review. As part of the identification effort, we are seeking information from all parties that may have knowledge of or concerns with historic properties or cultural resources in the area of potential effect or may provide additional information about the project area beyond what is available in state and federal databases.

We would appreciate input on this undertaking from the Redlands Area Historical Society with any concerns about possible cultural properties or potential impacts within or adjacent to the area of potential effect. If you have any questions, please contact me at (909) 307-0046 or [ssifuentes@ecorpconsulting.com](mailto:ssifuentes@ecorpconsulting.com).

Commented [RC1]: Incorrect phone for Redlands office

Thank you in advance for your assistance in our cultural resource management study.

Sincerely,

Sonia Sifuentes  
Senior Archaeologist

### Re: LPA Property Project, San Bernardino County

Dear Mr. Cunningham:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information submitted for the above referenced project. The results were positive. Please contact the Tribes on the attached list for information. Please note that tribes do not always record their sacred sites in the SLF, nor are they required to do so. A SLF search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with a project's geographic area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites, such as the appropriate regional California Historical Research Information System (CHRIS) archaeological Information Center for the presence of recorded archaeological sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. Please contact all of those listed; if they cannot supply information, they may recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify the NAHC. With your assistance, we can assure that our lists contain current information.

If you have any questions or need additional information, please contact me at my email address: [Cameron.vela@nahc.ca.gov](mailto:Cameron.vela@nahc.ca.gov).

Sincerely,

*Cameron Vela*
